1 INTRODUCTION

Since 1995, a proficiency test for Fuel/Bio-Ethanol was organised every year by the Institute for Interlaboratory Studies. During the annual proficiency testing program 2014/2015, it was decided to continue the round robin for the analysis of Fuel/Bio-ethanol in agreement with EN15376:14 and ASTM D4806:14. In this interlaboratory study for Fuel/Bio-ethanol, 76 laboratories in 29 different countries have participated. See appendix 2 for the number of participants per country. In this report, the results of the Fuel/Bio-Ethanol 2014 proficiency test are presented and discussed. This report is also electronically available through the iis internet site www.iisnl.com.

2 SET-UP

The Institute for Interlaboratory Studies (iis) in Spijkenisse, the Netherlands, was the organiser of this proficiency test. Sample analyses for fit-for-use and homogeneity testing were subcontracted to an accredited laboratory. It was decided to send 2 samples of Ethanol 1 * 1 L bottle of Fuel/Bio Ethanol labelled #14230 and 1* 0.25 L bottle of Fuel/Bio Ethanol labelled #14231, especially for Gas Chromatography. Participants were requested to report rounded and unrounded results. The unrounded results were preferably used for statistical evaluation.

2.1 ACCREDITATION

The Institute for Interlaboratory Studies in Spijkenisse, the Netherlands, is accredited in agreement with ISO/IEC 17043:2010 (R007), since January 2000, by the Dutch Accreditation Council (Raad voor Accreditatie). This PT falls under the accredited scope. This ensures strict adherence to protocols for sample preparation and statistical evaluation and 100% confidentiality of participant's data. Feedback from the participants on the reported data is encouraged and customer's satisfaction is measured on regular basis by sending out questionnaires.

2.2 PROTOCOL

The protocol followed in the organisation was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of April 2014 (iis-protocol, version 3.3). This protocol can be downloaded from the iis website www.iisnl.com.

2.3 CONFIDENTIALITY STATEMENT

All data presented in this report must be regarded as confidential and for use by the participating companies only. Disclosure of the information in this report is only allowed by means of the entire report. Use of the contents of this report for third parties is only allowed by written permission of the Institute for Interlaboratory Studies. Disclosure of the identity of one or more of the participating companies will be done only after receipt of a written agreement of the companies involved.

2.4 SAMPLES

The necessary bulk material for samples #14230 and #14231 was obtained from a local trader. The bulk material was split in two for preparation of the samples.

Approximately 165 litre bulk sample was homogenised in a precleaned drum and divided over 110 amber glass bottles of 1L (labelled #14230). The homogeneity of the subsamples #14230 was checked by determination of Density in accordance with ASTM D4052 and Water in accordance with ASTM E203 on 8 stratified randomly selected samples.

	<i>Density @ 15°C in kg/L</i>	<i>Water in %M/M</i>
Sample #14230-1	0.79430	0.169
Sample #14230-2	0.79430	0.170
Sample #14230-3	0.79430	0.170
Sample #14230-4	0.79430	0.172
Sample #14230-5	0.79431	0.174
Sample #14230-6	0.79431	0.170
Sample #14230-7	0.79431	0.173
Sample #14230-8	0.79431	0.173

Table 1: Homogeneity tests results of subsamples #14230

From the test results of table 1, the repeatabilities were calculated and compared with 0.3 times the corresponding target reproducibility in agreement with the procedure of ISO 13528, Annex B2 in the next table:

	<i>Density @ 15 °C in kg/L</i>	<i>Water in %M/M</i>
r (Observed)	0.00001	0.005
reference method	ISO12185:96	E203:08
0.3 * R (ref. Method)	0.00015	0.023

Table 2: Repeatability of subsamples #14230

The second part of the batch, approximately 30 litres, was homogenised and divided over 110 amber glass bottles of 0.25 litres (labelled #14231). The homogeneity of the subsamples #14231 was checked by determination of Methanol in accordance with EN15721, proc. A.

	<i>Methanol in %M/M</i>
Sample #14231-1	0.0058
Sample #14231-2	0.0060
Sample #14231-3	0.0061
Sample #14231-4	0.0063
Sample #14231-5	0.0060
Sample #14231-6	0.0057
Sample #14231-7	0.0065
Sample #14231-8	0.0056

Table 3: Homogeneity tests results of subsamples #14231

From the test results of table 3, the repeatability was calculated and compared with 0.3 times the corresponding target reproducibility in agreement with the procedure of ISO 13528, Annex B2 in the next table:

	<i>Methanol in %M/M</i>
r (Observed)	0.0008
reference method	D5501:12e1
0.3 * R (ref. method)	0.0040

Table 4: Repeatability of subsamples #14231

The calculated repeatabilities of both samples are in agreement with the 0.3 times the reproducibility limits of the respective test methods. Therefore the homogeneity of the subsamples #14230 and #14231 was assumed.

To each of the participating laboratories: 1 * 1 L bottle (labelled #14230) and 1 * 0.25 L bottle (labelled #14231) were sent on November 12, 2014.

2.5 STABILITY OF THE SAMPLES

The stability of Ethanol, packed in the amber glass bottles, was checked. The material was found sufficiently stable for the period of the proficiency test.

2.6 ANALYSES

The participants were asked to determine on sample #14230: Acidity (Total), Appearance, Copper, Density at 20 °C, Electrical conductivity at 25 °C, Inorganic Chloride as Cl, Involatile material content, Nitrogen, Phosphorus, Sulphate content, Sulphur (Total) and Water (coulometric and titrimetric).

On sample #14231 was asked to determine: Ethanol, Acetaldehyde, Acetal, Acetone, Benzene, Cyclohexane, Crotonaldehyde, DEG, Dioxane, Ethyl acetate, iso-Butanol, iso-Propanol, MEG, Methanol, 3-methyl-1-Butanol, 2-methyl-1-Butanol, sum of 3-methyl-1-Butanol and 2-methyl-1-Butanol, n-Amylalcohol, n-Butanol, n-Propanol, sec-Amylalcohol, sec-Butanol, tert-Amylalcohol and tert-Butanol.

To get comparable results a detailed report form, on which the units were prescribed as well as the required standards and a letter of instructions were prepared and made available on the data entry portal www.kpmd.co.uk/sgs-iis/. The detailed report form was also made available for download on the iis website www.iisnl.com.

A SDS and a form to confirm receipt of the samples were added to the sample package.

3 RESULTS

During four weeks after sample despatch, the results of the individual laboratories were received. The original reported results are tabulated per determination in appendix 1 of this report. The laboratories are presented by their code numbers.

Directly after deadline, a reminder fax was sent to those laboratories that had not yet reported.

Shortly after the deadline, the available results were screened for suspect data. A result was called suspect in case the Huber Elimination Rule (a robust outlier test) found it to be an outlier. The laboratories that produced these suspect data were asked to check the (raw data of the) reported results.

Additional or corrected results have been used for data analysis and original results are placed under 'Remarks' in the result tables in appendix 1.

3.1 STATISTICS

Statistical calculations were performed as described in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' (iis-protocol, April 2014 version 3.3). For the statistical evaluation the *unrounded* (when available) figures were used instead of the rounded results. Results reported as '<...' or '>...' were not used in the statistical evaluation.

First, the normality of the distribution of the various data sets per determination was checked by means of the Lilliefors-test a variant of the Kolmogorov-Smirnov test and by the calculation of skewness and kurtosis. Evaluation of the three normality indicators in combination with the visual evaluation of the graphic Kernel density plot, lead to judgement of the normality being either 'unknown', 'OK', 'suspect' or 'not OK'. After removal of outliers, this check was repeated. Not all data sets proved to have a normal distribution, in which cases the statistical evaluation of the results should be used with due care.

In accordance to ISO 5725 (1986 and 1994) the original results per determination were submitted subsequently to Dixon, Grubbs and Rosner outlier tests. Outliers are marked by D(0.01) for the Dixon test, by G(0.01) or DG(0.01) for the Grubbs test and by R(0.01) for the Rosner General ESD test (see appendix 3, no.16). Stragglers are marked by D(0.05) for the Dixon test, by G(0.05) or DG(0.05) for the Grubbs test and by R(0.05) for the Rosner's test. Both outliers and stragglers were not included in the calculations of the averages and the standard deviations.

For each assigned value, the uncertainty was determined in accordance with ISO13528. Subsequently the calculated uncertainty was evaluated against the respective requirement based on the target reproducibility in accordance with ISO13528. When the uncertainty passed the evaluation, no remarks are made in the report. However, when the uncertainty failed the evaluation it is mentioned in the report and it will have consequences for the evaluation of the test results.

Finally, the reproducibilities were calculated from the standard deviations by multiplying them with a factor of 2.8.

3.2 GRAPHICS

In order to visualise the data against the reproducibilities from literature, Gauss plots were made, using the sorted data for each determination (see appendix 1). On the Y-axis the reported analysis results are plotted. The corresponding laboratory numbers are under the X-axis. The straight horizontal line presents the consensus value (a trimmed mean). The four striped lines, parallel to the consensus value line, are the +3s, +2s, -2s and -3s target reproducibility limits of the selected standard. Outliers and other data, which were excluded from the calculations, are represented as a cross. Accepted data are represented as a triangle. Furthermore, Kernel Density Graphs were made. This is a method for producing a smooth density approximation to a set of data that avoids some problems associated with histograms (see appendix 3; nos.14 and 15). Also a normal Gauss curve was projected over the Kernel Density Graph for reference.

3.3 Z-SCORES

To evaluate the performance of the participating laboratories the z-scores were calculated. As it was decided to evaluate the performance of the participants in this proficiency test (PT) against the literature requirements, e.g. ASTM reproducibilities, the z-scores were calculated using a target standard deviation. This results in an evaluation independent of the spread of this interlaboratory study. The target standard deviation was calculated from the literature reproducibility by division with 2.8.

When a laboratory did use a test method with a reproducibility that is significantly different from the reproducibility of the reference test method used in this report, it is strongly advised to recalculate the z-score, while using the reproducibility of the actual test method used, this in order to evaluate whether the reported test result is fit-for-use.

The z-scores were calculated in accordance with:

$$z_{(\text{target})} = (\text{result} - \text{average of PT}) / \text{target standard deviation}$$

The $z_{(\text{target})}$ scores are listed in the result tables in appendix 1.

Absolute values for $z < 2$ are very common and absolute values for $z > 3$ are very rare. Therefore the usual interpretation of z-scores maybe as follows:

- $|z| < 1$ good
- $1 < |z| < 2$ satisfactory
- $2 < |z| < 3$ questionable
- $3 < |z|$ unsatisfactory

4. EVALUATION

In this interlaboratory study, problems with sample despatch were encountered due to several reasons. Eight participants reported after the deadline and 15 participants did not report any result at all. Not all participants were able to report all requested parameters. Not all laboratories were able to perform all analyses requested. The 68 reporting laboratories did report 837 results. Observed were 41 outlying results, which is 4.9%. In proficiency studies, outlier percentages of 3% - 7.5% are normal.

4.1 EVALUATION PER TEST

In this section, the results are discussed per sample and per test. The specified test methods and requirements were taken into account for explaining the observed differences when possible and applicable. These methods are also in the tables together with the reported data. The abbreviations, used in these tables, are listed in appendix 3.

In the iis PT reports, ASTM methods are referred to with a number (e.g. D2086) and an added designation for the year that the method was adopted or revised (e.g. D2086-08). If applicable, a designation in parentheses is added to designate the year of reapproval (e.g. D2086-08 (2013)). In the results tables of Appendix 1 only the method number and year of adoption or revision will be used.

For the components measured by Gas Chromatography, except Ethanol and Methanol, the observed spreads were compared against the (strict) reproducibility estimated from the Horwitz equation.

Not all original data sets proved to have a normal Gaussian distribution. These are referred to as "not OK" or "suspect". The statistical evaluation of these data sets should be used with due care.

Acidity: This determination was problematic for a number of laboratories. Four statistical outliers were observed. However, the calculated reproducibility after rejection of the statistical outliers is in full agreement with the requirements of EN15491:07 and ASTM D1613:12.

Appearance: This determination was not problematic. All participants agreed about the appearance of sample #14230 as clear and free of suspended matter.

Copper: Only seven laboratories reported a numerical result. All other reported a less than value. Therefore no statistical conclusions were drawn.

Density @20°C: This determination was problematic for a number of laboratories. Six statistical outliers were observed. However, the calculated reproducibility after rejection of the statistical outliers is in good agreement with the requirements of ISO12185:96.

Electrical Conductivity: This determination was very problematic. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is not at all in agreement with the requirements of EN15938:10.

Inorganic chloride: The consensus value of the group was below application range of the methods EN15492:12 (1 – 30 mg/L), ASTM D7319:13 (0.75– 50 mg/L) and EN15484:07 (4 – 30 mg/L). Therefore no statistical conclusions were drawn.

Involatile matter: All test results, except one, were below the application range of the test method EN15691:09 (10 – 25 mg/100ml). Therefore no significant conclusions were drawn.

Nitrogen: This determination was very problematic. No statistical outliers were observed. However, the calculated reproducibility is not at all in agreement with the requirements of D4629:12.

Phosphorous: All test results were near or below the application range of method EN15487:07 (0.15 – 1.50 mg/kg). Therefore no statistical conclusions were drawn.

Sulphate: The consensus value of the group was below application range of the methods EN15492:12 (1 – 20 mg/L) and ASTM D7319:09 (1– 50 mg/L). Therefore no statistical conclusions were drawn.

Total Sulphur: Although the sulphur concentration was below the application ranges of the test methods EN15485:07 (7– 20 mg/kg) and EN15486:07 (5 – 20 mg/kg), this determination may not be problematic. No statistical outliers were observed and the calculated reproducibility is in good agreement with the requirements of EN15485:07 and EN15486:07, but not in agreement with the requirements of ASTM D5453:09. When the test results from ASTM D5453:09 are evaluated separately than the calculated reproducibility is also not in agreement with the requirements of ASTM D5453:09.

Water: The coulometric or the titrimetric Karl Fisher method can be used for this determination. In total three statistical outliers were observed. The calculated reproducibility for the coulometric method is in full agreement with the requirements of EN15489:07 and ASTM E1064:12. For the titrimetric Karl Fisher method the calculated reproducibility is in good agreement with the requirements of ASTM E203:08.

Ethanol: This determination may be problematic, depending on the method used. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is not at all in agreement with the requirements of EN15721:13 but is in good agreement with the requirements of ASTM D5501:12e1 (20 – 100%).

- Acetaldehyde: This determination may be very problematic. Five statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not at all in agreement with the estimated reproducibility using the Horwitz equation.
- Acetal: This determination may be very problematic. One statistical outlier was observed. However, the calculated reproducibility after rejection of the statistical outlier is not at all in agreement with the estimated reproducibility using the Horwitz equation.
- Ethyl acetate: This determination was not problematic. Three statistical outliers were observed. However, the calculated reproducibility after rejection of the statistical outliers is in agreement with the estimated reproducibility using the Horwitz equation.
- iso-Butanol: This determination may be problematic. No statistical outliers were observed. However, the calculated reproducibility is not in agreement with the estimated reproducibility using the Horwitz equation.
- Methanol: This determination was not problematic. Three statistical outliers were observed. However, the calculated reproducibility after rejection of the statistical outliers is in good agreement with the requirements of ASTM D5501:12e1. When using standard EN15721:13 a negative value for the reproducibility was found at this concentration level.
- 3-Me-1-Butanol: This determination may be problematic. Three statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the estimated reproducibility using the Horwitz equation.
- 2-Me-1-Butanol: This determination may be very problematic. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is not at all in agreement with the estimated reproducibility using the Horwitz equation.
- Sum of
3-Me-1-Butanol
and
2-Me-1-Butanol: This determination may be not problematic. Two statistical outliers were observed and one test result was excluded because the summation was not correct. Eight laboratories reported the sum but did not report the test results for the individual components. The calculated reproducibility after rejection of the suspect data is in agreement with the estimated reproducibility using the Horwitz equation.
- n-Butanol: This determination may be problematic. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the estimated reproducibility using the Horwitz equation.

n-Propanol: This determination was not problematic. No statistical outliers were observed. The calculated reproducibility is in agreement with the estimated reproducibility using the Horwitz equation.

Other GC components: The concentrations of the components Acetone, Benzene, Cyclohexane, Crotonaldehyde, DEG, Dioxane, iso-Propanol, MEG, n-Amylalcohol, sec-Amylalcohol, sec-Butanol, tert-Amylalcohol, and tert-Butanol, were all near or below the detection limit. Therefore no significant conclusions were drawn.

4.2 PERFORMANCE EVALUATION FOR THE GROUP OF LABORATORIES

A comparison has been made between the reproducibility as declared by the relevant standard and the reproducibility as found for the group of participating laboratories. The average results per sample, calculated reproducibilities and reproducibilities derived from literature standards (in casu ASTM or EN standards) or the Horwitz equation are compared in the next table.

Parameter	unit	n	average	2.8 *sd _R	R (lit)
Acidity as Acetic acid	%M/M	53	0.0018	0.0014	0.0014
Appearance		53	B&C	n.a.	n.a
Copper	mg/kg	30	<0.07	n.a	n.a
Density @ 20°C	kg/L	57	0.7901	0.0003	0.0005
Electrical conductivity	µS/cm	28	1.34	0.49	0.23
Inorganic Chloride as Cl	mg/kg	21	0.25	0.47	(0.52)
Involatile material content	mg/100 mL	32	1.43	3.20	(0.26)
Nitrogen	mg/kg	21	2.30	2.51	1.24
Phosphorous	mg/L	6	0.02	0.07	(0.06)
Sulphate	mg/kg	23	0.89	0.80	(0.34)
Total Sulphur	mg/kg	29	0.83	0.67	3.32
Water coulometric	%M/M	53	0.180	0.023	0.022
Water titrimetric	%M/M	28	0.174	0.020	0.078

Table 5: Reproducibilities of sample #14230

results between brackets should be used with care, because the average was near or below the application range.

Parameter	Unit	n	average	$2.8 * s_{dR}$	R (lit)
Ethanol	%M/M	42	99.587	0.349	0.147
Acetaldehyde	%M/M	28	0.017	0.006	0.004
Acetal	%M/M	29	0.020	0.008	0.004
Acetone	%M/M	22	<0.01	n.a.	n.a.
Benzene	%M/M	23	<0.01	n.a.	n.a.
Cyclohexane	%M/M	17	<0.01	n.a.	n.a.
Crotonaldehyde	%M/M	12	<0.01	n.a.	n.a.
DEG	%M/M	10	<0.01	n.a.	n.a.
Dioxane	%M/M	12	<0.01	n.a.	n.a.
Ethyl acetate	%M/M	32	0.013	0.002	0.003
iso-Butanol	%M/M	41	0.051	0.011	0.009
iso-Propanol	%M/M	22	<0.01	n.a.	n.a.
Methanol	%M/M	42	0.006	0.003	0.013
3-Me-1-Butanol	%M/M	25	0.071	0.018	0.012
2-Me-1-Butanol	%M/M	24	0.021	0.011	0.004
Sum 2-Me-1-BuOH+3-Me-1-BuOH	%M/M	28	0.091	0.019	0.021
n-Butanol	%M/M	32	0.0015	0.0010	0.0004
n-Propanol	%M/M	39	0.072	0.013	0.012
sec-Butanol	%M/M	29	<0.01	n.a.	n.a.
n-Amylalcohol	%M/M	17	<0.01	n.a.	n.a.
sec-Amylalcohol	%M/M	11	<0.01	n.a.	n.a.
MEG	%M/M	10	<0.01	n.a.	n.a.
tert-Amylalcohol	%M/M	13	<0.01	n.a.	n.a.
tert-Butanol	%M/M	13	<0.01	n.a.	n.a.

Table 6: Reproducibilities of sample #14231

results between brackets should be used with care, because the average was near or below the application range.

Without further statistical calculations, it can be concluded that for most of the tests there is a compliance of the group of participating laboratories with the relative standards. The tests, that are problematic, have been discussed in paragraph 4.1.

4.3 COMPARISON OF THE PROFICIENCY TEST OF NOVEMBER 2014 WITH PREVIOUS PTS

	November 2014	November 2013	November 2012	November 2011
Number of reporting labs	68	71	67	55
Number of results reported	817	880	845	805
Statistical outliers	42	41	52	45
Percentage outliers	5.1%	4.7%	6.2%	5.6%

Table 7: Comparison with previous proficiency tests.

In proficiency tests, outlier percentages of 3% - 7.5% are quite normal.

The performance of the determinations of the proficiency tests was compared against the requirements of the respective standards. The conclusions are given in the following table:

Determination	November 2014	November 2013	November 2012	November 2011
Acidity as Acetic Acid	+/-	+	+/-	+/-
Density @ 20°C	++	+	++	++
Electric conductivity	--	--	--	--
Inorganic Chloride as Cl	+	-	(+)	--

n-Amylalcohol	n.e.	n.e.	n.e.	n.e.
sec-Amylalcohol	n.e.	n.e.	n.e.	n.e.
MEG	n.e.	n.e.	n.e.	n.e.
tert-Amylalcohol	n.e.	n.e.	n.e.	n.e.
tert-Butanol	n.e.	n.e.	n.e.	n.e.

Table 8: comparison determinations against the standard
 results between brackets are compared with the spread of the previous round robin

The performance of the determinations against the requirements of the respective standards is listed in the above table. The following performance categories were used:

- ++: group performed much better than the standard
- + : group performed better than the standard
- +/-: group performance equals the standard
- : group performed worse than the standard
- : group performed much worse than the standard
- n.e.: not evaluated

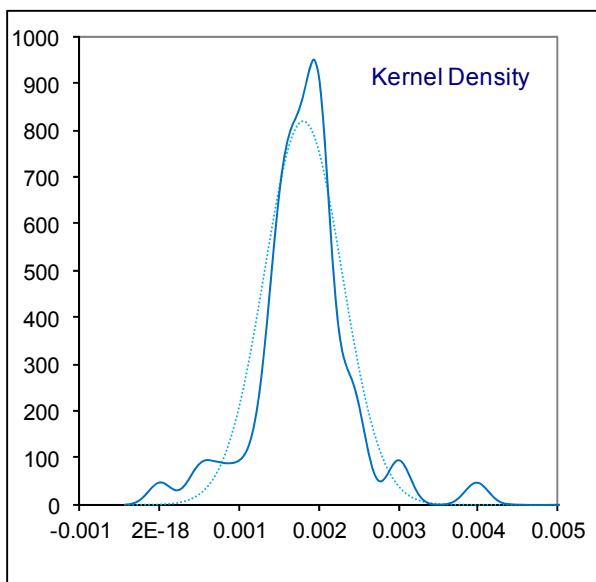

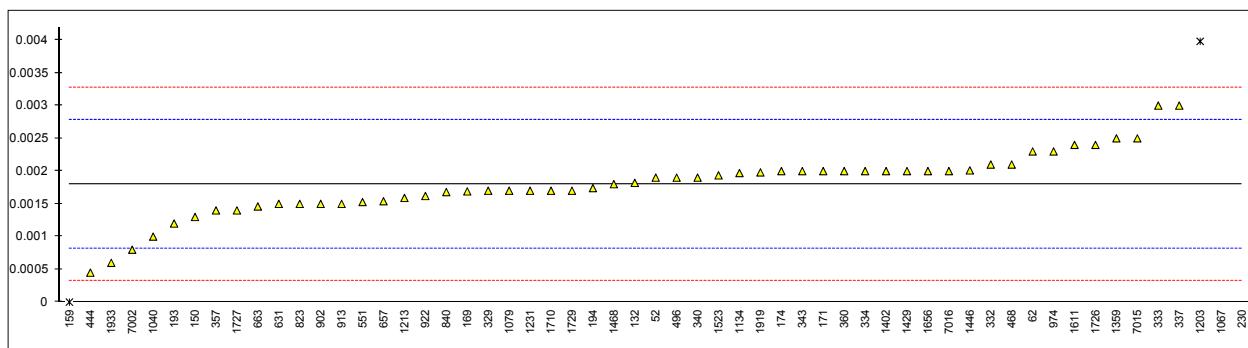

APPENDIX 1

Determination of Acidity as Acetic Acid on sample #14230; results in %M/M

APPENDIX 2**Number of participating laboratories per country:**

1 lab in ARGENTINA
2 labs in AUSTRIA
4 labs in BELGIUM
5 labs in BRAZIL
1 lab in BULGARIA
2 labs in CANADA
1 lab in CZECH REPUBLIC
1 lab in FINLAND
8 labs in FRANCE
2 labs in GERMANY
2 labs in HUNGARY
1 lab in INDIA
3 labs in IRAN, Islamic Republic of
1 lab in MAURITIUS
6 labs in NETHERLANDS
2 labs in PAKISTAN
1 lab in PERU
1 lab in PHILIPPINES
1 lab in POLAND
1 lab in SINGAPORE
1 lab in SOUTH KOREA
4 labs in SPAIN
2 labs in SWEDEN
2 labs in THAILAND
2 labs in TURKEY
1 lab in UNITED ARAB EMIRATES
6 labs in UNITED KINGDOM
10 labs in UNITED STATES OF AMERICA
2 labs in VIETNAM

APPENDIX 3**Abbreviations:**

C	= final result after checking of first reported suspect result
D(0.01)	= outlier in Dixon's outlier test
D(0.05)	= straggler in Dixon's outlier test
G(0.01)	= outlier in Grubbs' outlier test
G(0.05)	= straggler in Grubbs' outlier test
DG(0.01)	= outlier in Double Grubbs' outlier test
DG(0.05)	= straggler in Double Grubbs' outlier test
R(0.01)	= outlier in Rosner outlier test
R(0.05)	= straggler in Rosner outlier test
E	= error in calculations
ex	= excluded from calculations
n.a.	= not applicable
U	= unit error
SDS	= Safety Data Sheet
