## 1 INTRODUCTION

Phthalates act as softeners and are commonly used as plasticizers in PVC. Phthalates may migrate fairly easily from PVC into the environment. Because phthalates appeared to have negative effects on health and the environment, regulations have been set up.

The manufacture and import of toys into the EC is regulated by the European Union's Toy Directive 88/378, with in addition the general product safety, which is covered by EU directive 2001/95 and Council Directive + amendments 76/769/EEC. These regulations govern conditions related to toys intended for children under 36 months of age (this group often suck or chew on toys and phthalates migrate easily). Therefore plastic toys are not allowed to contain either more than 0.1 %M/M of DEHP, DBP and BBP combined or more than 0.1%M/M of DINP (3 mixtures, ref. 21), DIDP (2 mixtures, ref 22) and DNOP combined.

• bis(2-ethylhexyl)phthalate (DEHP) <sup>1)</sup>	CASno. 117-81-7	EINECS no. 204-211-0
• dibutylphthalate (DBP)	CASno. 84-74-2	EINECS no. 201-557-4
• benzylbutylphthalate (BBP)	CASno. 85-68-7	EINECS no. 201-622-7
• di-isobutylphthalate (DINP-1)	CASno. 28553-12-0	EINECS no. 249-079-5
• di-isobutylphthalate (DINP-2)	CASno. 68515-48-0	EINECS no. 271-090-9
• di-isobutylphthalate (DINP-3)	CASno. 28552-12-0	EINECS no. 249-079-5
• di-isodecylphthalate (DIDP-1)	CASno. 26761-40-0	EINECS no. 247-977-1
• di-isodecylphthalate (DIDP-2)	CASno. 68515-49-1	EINECS no. 271-091-4
• di-n-octylphthalate (DNOP)	CASno. 117-84-0	EINECS no. 204-214-7

<sup>1)</sup> DEHP is also known as di-(iso)-octylphthalate (DOP).

The determination of phthalates in plastics is known to give problems with the comparability of laboratory results. The fact that phthalates, used in the plastic industry are not pure components, but complex (and overlapping) mixtures is one of the causes for these problems. However, no appropriate Plastic reference materials are yet available (ref. 20).

As an alternative, participation in a proficiency test may enable laboratories to check their performance. Therefore, a proficiency test (laboratory-evaluating interlaboratory study) for the determination of phthalates in plastics was again organized by the Institute for Interlaboratory Studies in April 2013.

In the 2013 iis interlaboratory study iis13P01, 176 laboratories in 36 different countries did participate. See appendix 3 for the number of participating laboratories per country. In this report the results of the proficiency test are presented and discussed.

## 2 SET UP

The Institute for Interlaboratory Studies in Spijkenisse was the organiser of this proficiency test. It was decided to send two different PVC samples. The first sample, a children's booklet, was obtained from the local market. From the booklet only the (uncoated) purple dress of the plastic witch in the book should be tested. Besides the individual phthalates was also requested to report if the accessible part of sample #13044 can be placed in the mouth. The second batch was a PVC granulate, especially prepared by a Chinese factory by addition of technical mixtures of phthalates to PVC and subsequent homogenization. Analyses were subcontracted.

### 2.1 QUALITY SYSTEM

The Institute for Interlaboratory Studies in Spijkenisse, the Netherlands, has implemented a quality system based on ISO Guide 43, ILAC-G13:2007 (R007) and IEC/ISO17043:2010. This ensures strict adherence to protocols for sample preparation and statistical evaluation and 100% confidentiality of participant's data. Also customer's satisfaction is measured on a regular basis by sending out questionnaires.

### 2.2 PROTOCOL

The protocol followed in the organisation of this proficiency test was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of January 2010 (iis-protocol, version 3.2).

### 2.3 CONFIDENTIALITY STATEMENT

All data presented in this report must be regarded as confidential and for use by the participating companies only. Disclosure of the information in this report is only allowed by means of the entire report. Use of the contents of this report for third parties is only allowed by written permission of the Institute for Interlaboratory Studies. Disclosure of the identity of one or more of the participating companies will be done only after receipt of a written agreement of the companies involved.

## 2.4 SAMPLES

Two samples were prepared from two different bulk materials.

The first sample was a children's booklet, with a plastic witch inside and labelled #13044. Each participant received one booklet. The homogeneity of the subsamples #13044 was checked by determination of phthalates on the uncoated purple dress of the witch of 8 stratified randomly selected subsamples.

	DINP in %M/M
Sample #13044-1	30.2
Sample #13044-2	29.0
Sample #13044-3	29.6
Sample #13044-4	28.9
Sample #13044-5	29.3
Sample #13044-6	28.2
Sample #13044-7	27.9
Sample #13044-8	29.9

Table 1: homogeneity test results of the subsamples #13044

From the above test results the repeatabilities were calculated and compared with 0.3 times the estimated reproducibility of EN14372:04 in agreement with the procedure of ISO 13528, Annex B2 in the next table;

	DINP in %M/M
r (observed) #13044	2.2
reference method	EN14372:04
0.3 x R (ref. method)	2.2

Table 2: evaluation of repeatabilities of phthalate contents of the subsamples #13044

The second bulk material was a coloured PVC, to which small, known amounts of DBP, BBP and DIDP were added. The batch of PVC was granulated, mixed well, and divided over 207 plastic bags of 3 gram each and labelled #13045.

This batch was also used in a previous proficiency test iis08P01. The statistical data observed in the proficiency test ii08P01 showed that the homogeneity was in good agreement with the standard precision data.

As the observed repeatabilities of the results of the homogeneity tests were all in agreement with the target precision data, the homogeneity of subsamples #13044 and #13045 was assumed.

To each of the participating laboratories, one children's booklet, labelled #13044 and one sample of approx. 3 grams granulate (labelled #13045) were sent on April 3, 2013.

## 2.5 ANALYSIS

The participants were requested to determine and report ten individual phthalates (DINP1&2, DBP, BBP, DHP, DIDP1&2, DNOP, DEHP and DiBP) and other phthalates on both samples #13044 and #13045.

The participants were explicitly asked to treat the samples as if they were routine samples and to report the analytical results using the indicated units on the report form and not to round the test results, but report as much significant figures as possible.

The participants were also asked not to report 'less than' results which are above the detection limit, because such results can not be used for meaningful statistical calculations. For sample #13044 was also requested to report is the accessible part of sample #13044 can be placed in the mouth (EU regulations: entry 25 of Annex XVII to REACH Regulation 1907/2006, further elaborated in Guideline on the interpretation of the concept "which can be placed in the mouth" as laid down in the entry 52 of Annex XVII to REACH Regulation 1907/2006 and USA regulations: 16 C.F.R. Part 1501 and 1500.50-53, further elaborated in 16 C.F.R. 1199).

To get comparable results a detailed report form, on which the units were prescribed, was sent together with each set of samples. Also a letter of instructions was added to the package.

The laboratories were asked to complete the report form with the requested details of the methods used.

## 3 RESULTS

During four weeks after sample despatch the results of the individual laboratories were received. The original data are tabulated per sample in the appendix 1 of this report. The laboratories are presented by their code numbers.

Directly after deadline, a reminder fax was sent to those laboratories that did not report results at that moment. Shortly after the deadline the available results were screened for suspect data. A result was called suspect in case the Huber Elimination Rule (a robust outlier test) found it to be an outlier. The laboratories that produced these suspect data were asked to check the results. Additional or corrected results are used for the data analysis and the original results are placed under 'Remarks' in the result tables in appendix 1.

### 3.1 STATISTICS

For the statistical evaluation the *unrounded* (when available) figures were used instead of the rounded results. Results reported as '<...' or '>...' were not used in the statistical evaluation. First the normality of the distribution of the various data sets per determination was checked by means of the Lilliefors-test. After removal of outliers, this check was repeated.

Not all data sets proved to have a normal distribution, in which cases the statistical evaluation of the results should be used with due care. In accordance to ISO 5725 (1986 and 1994) the original results per determination were submitted subsequently to Dixon and Grubbs outlier tests. Outliers are marked by D(0.01) for the Dixon test, by G(0.01) or DG(0.01) for the Grubbs test. Stragglers are marked by D(0.05) for the Dixon test, by G(0.05) or DG(0.05) for the Grubbs test. Both outliers and stragglers were not included in the calculations of averages and standard deviations.

Finally the reproducibilities were calculated from the standard deviations by multiplying them with a factor of 2.8.

Statistical calculations were performed as described in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of January 2010 (iis-protocol, version 3.2).

For each assigned value the uncertainty was determined in accordance with ISO13528. Subsequently the calculated uncertainty was evaluated against the respective requirement based on the target reproducibility in accordance with ISO13528. When the uncertainty passed the evaluation no remarks are made in the report. However, when the uncertainty failed the evaluation it is mentioned in the report and it will have consequences for the evaluation of the test results.

### 3.2 GRAPHICS

In order to visualise the data against the reproducibilities from literature, Gauss plots were made, using the sorted data for one determination (see appendix 1). On the Y-axis the reported analysis results are plotted. The corresponding laboratory numbers are under the X-axis. The straight horizontal line presents the consensus value (a trimmed mean). The four striped lines, parallel to the consensus value line, are the +3s, +2s, -2s and -3s target reproducibility limits of the selected standard. Outliers and other data, which were excluded from the calculations, are represented as a cross. Accepted data are represented as a triangle. Furthermore, Kernel Density Graphs were made. This is a method for producing a smooth density approximation to a set of data that avoids some problems associated with histograms (see appendix 4, nos.17-18).

### 3.3 Z-SCORES

To evaluate the performance of the participating laboratories the z-scores were calculated. As it was decided to evaluate the performance of the participants in this proficiency test (PT) against the literature requirements, e.g. the EN14372 reproducibilities, the z-scores were calculated using a target standard deviation. This results in an evaluation independent of the spread of this interlaboratory study. The target standard deviation was calculated from the literature reproducibility by division with 2.8.

The z-scores were calculated according to:

$$Z_{(\text{target})} = (\text{result} - \text{average of PT}) / \text{target standard deviation}$$

The  $Z_{(\text{target})}$  scores are listed in the result tables in appendix 1.

When a laboratory did use a test method with a reproducibility that is significantly different from the reproducibility of the reference test method used in this report, it is strongly advised to recalculate the z-score, while using the reproducibility of the actual test method used this in order to evaluate the fit-for-useness of the reported test result.

Absolute values for  $z < 2$  are very common and absolute values for  $z > 3$  are very rare. The usual interpretation of z-scores is as follows:

$ z  < 1$	good
$1 <  z  < 2$	satisfactory
$2 <  z  < 3$	questionable
$3 <  z $	unsatisfactory

## 4 EVALUATION

In this interlaboratory study no problems were encountered during the execution.

Only six participants did not report any test results. Finally, 170 laboratories reported 1085 numerical results. Observed were 47 statistically outlying test results, which is 4.3% of all results. In proficiency studies outlier percentages of 3% - 7.5% are quite normal.

### 4.1 EVALUATION PER PHTHALATE AND PER SAMPLE

In this section the results are discussed per component.

Many different test methods were used by the participating laboratories. Many participants reported to have used the standard test method: CPSC-CH-C1001-09 (dissolution in THF), but also several other standard test methods were used: EN14372 (Soxhlet extraction with diethyl ether) and ASTM D3421 (Soxhlet extraction with Chloroform) and in-house methods. Regretfully the CPSC method does not contain any precision statements. Therefore, the requirements from the standardised method EN14372:04, "Child use and care articles, Cutlery and feeding utensils, Safety requirements and tests" were used for evaluation of the results of this interlaboratory study.

Regretfully, only a relative within-laboratory standard deviation RSD<sub>r</sub> is given in EN14372:04. Multiplication of RSD<sub>r</sub> by 2.8 gives the repeatability. Multiplication of the repeatability by 3 gives a good estimate of the target reproducibility.

General: Almost all laboratories did identify the material of #13044 and #13045 correctly as PVC (see appendix 2). The presence of a significant amount (approx. 20%) of di-isobutylphthalate (CAS 28553-12-0,68515-48-0,28552-12-0) in sample #13044 did not hamper the identification of the plastic by infrared.

The majority of the group identified all the added phthalates correctly: #13044 contained DINP and DBP and sample #13045 contained DBP, BBP and DIDP.

#### Sample #13044

DINP: The determination of DINP was very problematic at the level of 37.6 %M/M. Nine statistical outliers and one false negative result were detected. The calculated reproducibility after rejection of the statistical outliers is not at all in agreement with the estimated reproducibility of EN14372:04.

DBP: The determination of DBP was very problematic at the level of 0.072 %M/M (below the maximum limit of 0.1%M/M). The reported test results vary over a large range from 0.001 – 0.65 %M/M. Only two statistical outliers were observed. However, the calculated reproducibility, after rejection of the statistical outliers, is not at all in agreement with the estimated reproducibility of EN14372:04. An explanation for the observed problems may be the low (<0.1%) DBP concentration in the presence of the high (38%) DINP concentration. Also, an unexpected inhomogeneity of DBP in this real-world sample may be an explanation. During the homogeneity study no significant DBP concentration (above 0.05%M/M) in any of the 8 samples was found.

DIDP: The determination of DIDP in #13044 was very problematic. One group of 61 participants reported that no DIDP was present, while 68 participants reported a positive result for DIDP. See also the discussion in chapter 5

For BBP, DNOP, DEHP, DiBP and DHP the group of participants agreed on a concentration below <0.1 %M/M. Therefore no significant conclusions were drawn.

### Sample #13045

DBP: The determination of DBP was problematic at the level of 0.27 %M/M for sample #13045. Fifteen statistical outliers and one false negative result were detected. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the estimated reproducibility of EN14372:04.

BBP: The determination of BBP was problematic at the level of 0.43 %M/M. Thirteen statistical outliers were detected. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the estimated reproducibility of EN14372:04.

DIDP: The determination of DIDP was problematic at the level of 0.24 %M/M. Seven statistical outliers and seven false negative results were detected. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the estimated reproducibility of EN14372:04.

For DINP, DNOP, DEHP, DiBP and DHP the group of participants agreed on a concentration below <0.1 %M/M. Therefore no significant conclusions were drawn.

## 4.2 PERFORMANCE EVALUATION FOR THE GROUP OF LABORATORIES

A comparison has been made between the reproducibilities as found for the group of participating laboratories and the estimated reproducibilities of EN14372:2004 ( $R_{target}$ ) in the next tables:

Parameter	Unit	n	Average	$2.8 * sd$	$R$ (target)
DINP	%M/M	154	37.56	21.14	9.46
DBP	%M/M	147	0.072	0.148	0.018
DIDP	%M/M	61/65	0.041 / 0.440	0.091 / 0.287	0.010 / 0.111

Table 4: overview of results for sample #13044

Parameter	Unit	n	Average	$2.8 * sd$	$R$ (target)
DBP	%M/M	151	0.27	0.10	0.07
BBP	%M/M	153	0.43	0.16	0.11
DIDP	%M/M	145	0.24	0.13	0.06

Table 5: overview of results for sample #13045

#### 4.3 COMPARISON OF THE PROFICIENCY TEST OF APRIL 2013 WITH PREVIOUS PTS

	<i>April 2013</i>	<i>February 2012</i>	<i>February 2011</i>	<i>February 2010</i>
Number of reporting labs	170	155	120	134
Number of results reported	1085	935	1250	767
Statistical outliers	47	51	103	59
Percentage outliers	4.3%	5.5%	8.2%	7.7%

Table 6: comparison with previous proficiency tests

In proficiency tests, outlier percentages of 3% - 7.5% are quite normal.

In comparison with previous proficiency tests, the improvement was not put for the components evaluated, see below table. From 2008 - 2010 significant differences between the EN14372 results and the results from THF dissolution were observed. In the current PT this was no longer the case.

<i>R (%rel.)</i>	<i>April 2013</i>	<i>February 2012</i>	<i>February 2011</i>	<i>February 2010</i>	<i>February 2009</i>	<i>February 2008</i>
DINP <sup>1)</sup>	56	73	33 – 47	42 <sup>T</sup> – 167 <sup>E</sup>	--	69 <sup>T</sup> – 72 <sup>E</sup>
DBP	39 – 206 <sup>2</sup>	31 – 46	48	39	52 <sup>T</sup> – 61 <sup>E</sup>	42 <sup>E</sup> – 82 <sup>T</sup>
DEHP	--	37 – 49	34 – 36	21 <sup>T</sup> – 153 <sup>E</sup>	46 <sup>E</sup> – 54 <sup>T</sup>	29 <sup>T</sup> – 54 <sup>E</sup>
BBP	37	32	37 – 42	39	58 <sup>E</sup> – 127 <sup>T</sup>	64 <sup>E</sup> – 79 <sup>T</sup>
DIDP	53 – 160 <sup>2</sup>	--	43	--	--	39 <sup>T</sup> – 51 <sup>E</sup>
DNOP	--	57	41	--	--	--
DHP	--	--	30	--	--	--

Table 7: Relative reproducibilities of detected phthalates in this PT and the former PTs (E=EN14372; T=THF dissolution)

1) Mix of DINP-1 and DINP-2 isomers

2) in sample #13044, with 37% DINP present

## 5 DISCUSSION

As remarked above significant differences were observed between EN14372 results and results from THF dissolution in the PTs in 2008, 2009 and 2010. This was caused by the significant differences in recovery between the two extraction methods. The recovery of the THF dissolution method will be close to 100%, while the recovery of the Soxhlet extraction with diethyl ether (EN14372) will strongly depend on the grain size of the sample and the extraction time. Obviously the laboratories participating in the iis' PTs were able to improve the recovery of the EN14372 method significantly over the last years, thus reducing the difference with the THF recovery to be no longer significant and thus closing the gap with the THF-dissolution method. Regretfully, it is clear from the figures in table 7 that the overall performance of the laboratories that tested phthalates in plastics did not improve. It is also clear that when a large concentration (approx. 37%) of one phthalate is present in the sample the determination of minor phthalates showed much more problems and therefore further improvement is still to be expected. The relative reproducibilities for these phthalates (DBP and DIDP) are very high.

The determination of DIDP in PVC sample #13044 was very problematic. One group of 61 participants reported that no DIDP was present, while 68 participants reported a significantly positive test result for DIDP between 0.1 and 0.9%M/M.

Carefully comparison of the GC/MS chromatogram for m/z= 307 of sample #13044 with the GC/MS chromatograms for m/z= 307 of sample #13045 and sample #11013 (from PT iis11P01) and with the calibrant DIDP shows that the chromatogram for sample #13044 is slightly deviating. The shape of the group of peaks is less symmetric and the retention time is 0.3 min. less than it is in the 3 other chromatograms.

And because the differences in retention time and shape are only small, part of the participating laboratories will have decided that the difference was small enough to identify the observed group of peaks was DIDP, while the other laboratories decided that the difference was too large to identify the observed group of peaks as DIDP.

This difference may partly be explained by the fact that DIDP does exist of a complex mixture of di-C9-, di-C10- and di-C11-branched alkyl esters of phthalic acid, but also by the existence of different mixtures (DIDP-1 and DIDP-2, see ref. 22). Sample #13044 may contain another mixture than the calibration standard and the other two PT samples.

The participants were requested also to answer the question: whether the accessible part can be placed in the mouth. This in accordance with the EU and USA regulations:

EU regulations: entry 25 of Annex XVII to REACH Regulation 1907/2006, further elaborated in Guideline on the interpretation of the concept "which can be placed in the mouth" as laid down in the entry 52 of Annex XVII to REACH Regulation 1907/2006

USA regulations: 16 C.F.R. Part 1501 and 1500.50-53, further elaborated in 16 C.F.R. 1199.

The answers received from the participants are summarized in appendix 2.

It was remarkable to see that there was no agreement at all between the participants about the accessibility: 110 participants answered the question with "yes" and 36 participants answered "no". And therefore different decisions would be made about rejecting or accepting the booklet as "safe" toy for children.

**APPENDIX 2**  
**Method information**

Lab	Type(s) of plastic identified	Identification Technique	Extraction Technique	Solvent used	Sample #13044 accessible part in mouth
110	unknown / PVC	FTIR	Ultrasonic	THF:hexane (1:2)	YES
213	--	--	--	--	--
310	PVC / PVC	FTIR	Ultrasonic	THF	--
330	--	--	Soxhlet	DCM:methanol	YES
339	--	--	Soxhlet	Chloroform:methanol	--
551	PVC / --	Flame test	Soxhlet / Ultrasonic	Chloroform:methanol / THF	YES
622	--	--	Soxhlet	THF	YES
1213	--	--	Ultrasonic	THF	--
2102	PVC	FTIR	Ultrasonic	THF	--
2104	--	--	Mechanical Shaker	DCM	YES
2115	--	--	--	--	--
2121	PVC	Beilsteintest	Ultrasonic	Hexane;acetone	YES
2127	--	--	--	--	--
2129	soft PVC / hard	FTIR	Ultrasonic	THF	YES
2132	PVC	FTIR	Mechanical Shaker	THF	YES
2137	PVC	FTIR	Ultrasonic	THF	YES
2138	PVC	FTIR	Ultrasonic	THF	YES
2139	PVC	FTIR	Ultrasonic	THF	YES
2146	PVC / PVC	IR / IR	Soxhlet / other	Diethylether / THF	YES
2152	--	--	Ultrasonic	THF	YES
2156	--	--	Soxhlet	DCM	NO
2165	--	--	Ultrasonic	MTBE:Acetone:n-Hexane	YES
2169	PVC	FTIR	Ultrasonic	THF	YES
2170	--	--	Ultrasonic	THF:n-hexane	YES
2172	PVC	FTIR	Ultrasonic	THF	NO
2173	PVC	flame	Ultrasonic	THF:n-hexane	YES
2175	--	--	Ultrasonic	n-hexane:acetone	--
2179	PVC	FTIR	Soxhlet	Toluene	NO
2182	--	--	Ultrasonic	THF	NO
2184	--	--	Ultrasonic	MTBE:Acetone:n-Hexane	YES
2190	--	--	--	--	YES
2196	PP / PVC	--	Ultrasonic	THF	NO
2197	PVC	Beilstein	--	THF	--
2201	--	--	Ultrasonic	THF:n-hexane	YES
2213	--	--	Soxhlet / Ultrasonic	Diethylether / THF	YES
2215	PVC	FTIR&Beilstein	Ultrasonic	THF	NO
2217	--	--	Ultrasonic	Toluene	YES
2218	--	--	Ultrasonic	THF	YES
2226	--	--	Ultrasonic	THF	YES
2229	--	--	Soxhlet	n-Hexane	NO
2230	PVC	FTIR	Ultrasonic	THF	YES
2232	PVC	FTIR	Ultrasonic	THF	YES
2236	PVC	FTIR	Ultrasonic	THF	YES
2237	--	--	Ultrasonic	DMF:Toluene (1:9)	NO
2238	PVC	FTIR	Shaking	THF	YES
2240	--	--	Ultrasonic	THF	NO
2242	--	--	Ultrasonic	THF	YES
2245	--	--	Soxhlet	Ether;n-hexane	NO
2247	PVC	FTIR	Ultrasonic	THF	YES
2253	PVC	--	Soxhlet	THF	YES
2254	--	--	--	--	--
2255	PVC	FTIR&ballestine	Ultrasonic	THF:n-hexane	--
2256	PVC	FTIR	Soxhlet	Diethylether	YES
2258	--	--	Ultrasonic	THF	YES
2264	--	--	Ultrasonic	THF	YES
2266	PVC	FTIR	Randhall	n-Hexane	YES
2267	PVC	FTIR	Ultrasonic	Acetone;n-hexane	--
2268	--	--	Ultrasonic	THF	NO
2269	--	--	Ultrasonic	DCM	NO
2277	PVC	comparing	Ultrasonic	DCM	YES
2284	--	--	Ultrasonic	Chloroform	YES
2288	PVC	FTIR	Ultrasonic	THF:n-hexane	YES
2289	--	--	Ultrasonic	THF	YES
2290	--	--	Ultrasonic	THF	YES
2293	Polydiallyl / PVC	FTIR	Ultrasonic	THF	YES
2295	--	--	Ultrasonic	THF	--
2296	PVC	Beilentest	Ultrasonic	THF	--

2309	PVC	Beilstein	Ultrasonic	THF	YES
2310	PVC	FTIR	Ultrasonic	THF, Hexane	YES
2311	PVC	Beilstein	Ultrasonic	THF	YES
2313	PVC	Beilstein	Ultrasonic	THF	YES
2316	--	--	Soxhlet / Ultrasonic	DEE / THF	NO
2353	PVC	FTIR	Soxhlet	DEE	YES
2359	--	--	Ultrasonic	Chloroform	NO
2361	PVC	FTIR	Shaking	THF: n-hexane	YES
2366	PVC	burning	Ultrasonic	THF	YES
2372	PVC	FTIR	Ultrasonic	THF:n-hexane	YES
2375	--	--	Ultrasonic	Chloroform	YES
2380	--	--	Soxhlet	other	YES
2386	PVC	IR	--	THF	YES
2390	PVC	IR	Soxhlet	DCM:Methanol	NO
2406	--	--	Ultrasonic	THF	YES
2410	PVC	FTIR	Obital Shaker	THF:n-hexane	YES
2412	PVC	--	Soxhlet	DCM	NO
2413	PVC	Beilstein	Ultrasonic	THF	YES
2415	PVC	Beilstein	Soxhlet	Chloroform	NO
2425	PVC	Beilstein	Ultrasonic	DCM	YES
2426	--	--	Ultrasonic	THF	NO
2429	--	--	Shaker	THF	YES
2431	--	--	Ultrasonic	THF:n-hexane	YES
2432	--	--	Ultrasonic	THF	--
2433	--	--	--	--	--
2438	PVC	FTIR	Soxhlet	Chloroform;methanol (1:2)	NO
2442	--	--	Ultrasonic	THF	--
2452	--	--	Soxhlet	n-Hexane	YES
2453	--	--	Ultrasonic	THF, n-Hexane	YES
2459	PVC	Beilstein	Shaker	THF	YES
2460	--	--	Ultrasonic	THF	YES
2465	--	--	Soxhlet	DCM	YES
2470	--	--	Ultrasonic	THF: n-hexane	YES
2475	--	--	Ultrasonic	THF	YES
2476	--	--	Ultrasonic	THF	YES
2479	PVC	flame	Ultrasonic	THF:n-hexane	YES
2482	--	--	Ultrasonic	Toluene	YES
2486	PVC	FTIR	Ultrasonic	THF	YES
2488	--	--	Ultrasonic	MTBE:Acetone:hexane	YES
2489	PVC	--	Ultrasonic	THF	YES
2492	--	--	Ultrasonic	THF	YES
2493	--	--	--	--	--
2494	--	--	Ultrasonic	THF	YES
2495	--	--	Ultrasonic	THF	YES
2496	PVC	FTIR	Ultrasonic	THF	YES
2497	PVC	IR	Ultrasonic	THF:n-hexane	YES
2500	PVC	FTIR	Ultrasonic	THF	YES
2503	PVC	Melting point	Microwave extraction	Cyclhexane:Isopropanol	YES
2507	--	--	Ultrasonic	THF:n-hexane	YES
2510	Polystyrene	FTIR	--	THF:n-hexane	NO
2511	--	--	--	--	NO
2514	PVC	FTIR	Ultrasonic	THF:n-hexane	--
2515	PVC	FTIR	Ultrasonic	THF	--
2516	PVC	IR	immersion	Acetone:n-hexane (3:7)	NO
2521	--	--	Soxhlet	n-hexane	NO
2522	PVC	FTIR	Ultrasonic	THF	YES
2526	PE / PVC	FTIR	Ultrasonic	DEE	YES
2529	PVC	FTIR	Ultrasonic	THF	YES
2530	PVC	Beilstein	Soxhlet	DCM	YES
2531	--	--	Soxhlet / Ultrasonic	DEE / THF	NO
2537	--	--	Soxhlet	DEE	NO
2543	--	--	--	--	--
2546	PVC	FTIR	--	THF	YES
2548	PVC	FTIR	Wrist Shaker	THF	YES
2549	--	--	Soxhlet	DCM:methanol	YES
2553	PVC	FTIR	Ultrasonic	THF	YES
2555	PVC	FTIR	Ultrasonic	THF	NO
2556	PVC	IR	Soxhlet	DCM	NO
2557	PVC	FTIR	Ultrasonic	THF	NO
3100	--	--	Shake	THF	YES
3107	--	--	Soxhlet	DEE	NO
3116	PVC	FTIR	Soxhlet	Diethylether	YES

3117	PVC	FTIR	Soxlet	Diethylether	NO
3118	--	--	Ultrasonic	THF:n-hexane	NO
3122	PVC	FTIR	Microwave	Methanol	YES
3146	PVC	FTIR,ATR	Ultrasonic	THF	YES
3150	--	--	Ultrasonic	Acetone:n-hexane	YES
3153	PVC	FTIR	Dissolution	THF	YES
3163	--	--	Thermal desorption	--	--
3166	--	--	Ultrasonic	DCM	--
3167	PVC	FTIR	Soxlet	DCM	NO
3169	--	--	--	THF	NO
3172	--	--	Ultrasonic	THF	--
3176	--	--	--	--	YES
3180	--	--	Ultrasonic	THF	YES
3182	--	--	Ultrasonic	THF	--
3185	--	--	Shaking	THF:n-hexane	YES
3190	PVC	FTIR	Shaking	THF:n-hexane	YES
3191	--	--	Soxlet / Ultrasonic	DCM / THF	YES
3197	PVC	FTIR	Soxlet / Ultrasonic	DEE / THF:n-hexane	YES
3199	--	--	Ultrasonic	THF	YES
3210	--	--	Ultrasonic	n-Hexane:Acetone	--
3213	PVC	FTIR	Ultrasonic	THF	--
3214	PVC	FTIR	Ultrasonic	THF	YES
3218	PVC	FTIR	Ultrasonic	THF	YES
3220	--	--	Ultrasonic	THF	--
3225	--	--	--	n-Hexane:acetone (7:3)	YES
3228	--	--	Ultrasonic	MTBE;Acetone;n-hexane	--
3233	--	--	Ultrasonic	THF:ACN	YES
3237	--	--	Ultrasonic	THF	--
3238	PVC	With Copper	--	THF;ethanol	NO
3239	PVC	FTIR	Soxlet	DCM	YES
3242	PVC	FTIR	Soxlet	DCM:methanol (1:1)	YES
3243	PVC	IR (ATR)	Ultrasonic	DCM	NO
3246	--	--	heating	Diethylether	NO
3248	PVC	Flame	Ultrasonic	THF:ACN	YES
8005	PVC	FTIR	Soxlet	Methylenechloride: Methanol	YES
8006	PVC	FTIR	Shaking	Acetone:n-hexane	YES
8007	PVC	FTIR	Ultrasonic	THF	YES

**APPENDIX 3****Number of participating laboratories per country**

6 labs in BANGLADESH  
4 labs in BRAZIL  
1 lab in DENMARK  
1 lab in EGYPT  
1 lab in FINLAND  
9 labs in FRANCE  
9 labs in GERMANY  
2 labs in GUATEMALA  
18 labs in HONG KONG  
2 labs in HUNGARY  
12 labs in INDIA  
4 labs in INDONESIA  
1 lab in IRELAND  
6 labs in ITALY  
4 labs in JAPAN  
5 labs in KOREA  
2 labs in MALAYSIA  
1 labs in MEXICO  
1 lab in MOROCCO  
34 labs in P.R. of CHINA  
3 labs in PAKISTAN  
1 lab in PERU  
1 lab in PHILIPPINES  
2 labs in PORTUGAL  
4 labs in SINGAPORE  
2 labs in SPAIN  
1 lab in SRI LANKA  
1 lab in SWITZERLAND  
3 labs in TAIWAN R.O.C.  
2 labs in THAILAND  
4 labs in THE NETHERLANDS  
2 labs in TUNESIA  
7 labs in TURKEY  
13 labs in U.S.A.  
2 labs in UNITED KINGDOM  
5 labs in VIETNAM

**APPENDIX 4****Abbreviations:**

C	= final result after checking of first reported suspect result
D(0.01)	= outlier in Dixon's outlier test
D(0.05)	= straggler in Dixon's outlier test
G(0.01)	= outlier in Grubbs' outlier test
G(0.05)	= straggler in Grubbs' outlier test
DG(0.01)	= outlier in Double Grubbs' outlier test
DG(0.05)	= straggler in Double Grubbs' outlier test
n.a.	= not applicable
n.d.	= not detected
fr	= first reported result
