1 INTRODUCTION

Since 1994 the Institute for Interlaboratory Studies (iis) organizes a proficiency scheme for the analysis of Fuel Oil based on the latest version of ISO8217 and ASTM D396 twice per year. During the annual proficiency testing program of 2023 it was decided to continue the round robin for the analysis of Fuel Oil.

In this interlaboratory study registered for participation:

- 143 laboratories in 62 countries for regular analyzes in Fuel Oil iis23F03
- 103 laboratories in 48 countries on the Metal analyzes iis23F03M
- 54 laboratories in 26 countries on the Bromine and P-value analyzes iis23F03Br
- 62 laboratories in 34 countries on the Compatibility analyzes iis23F03C

In total 156 laboratories in 64 countries registered for participation in one or more proficiency tests, see appendix 2 for the number of participants per country. In this report the results of the Fuel Oil proficiency tests are presented and discussed. This report is also electronically available through the iis website www.iisnl.com.

2 SET UP

The Institute for Interlaboratory Studies (iis) in Spijkenisse, the Netherlands, was the organizer of this proficiency test (PT). Sample analyzes for fit-for-use and homogeneity testing were subcontracted to a laboratory that has performed the tests in accordance with for ISO/IEC17043 relevant requirements of ISO/IEC17025.

In this proficiency test the participants received, depending on the registration, from one up to four different samples of Fuel Oil, see table below.

Sample ID	PT ID	Quantity	Purpose
#23275	iis23F03	1x 1 L	Regular analyzes
#23276	iis23F03M	1x 100 mL	Metals
#23277	iis23F03Br	1x 1 L	Bromine and P-value
#23278	iis23F03C	2x 40 mL	Compatibility

Table 1: Fuel Oil samples used in PT iis23F03

Participants were requested to report rounded and unrounded test results. The unrounded test results were preferably used for statistical evaluation.

2.1 ACCREDITATION

The Institute for Interlaboratory Studies in Spijkenisse, the Netherlands, is accredited in agreement with ISO/IEC17043:2010 (R007), since January 2000, by the Dutch Accreditation Council (Raad voor Accreditatie). This PT falls under the accredited scope. This ensures strict adherence to protocols for sample preparation and statistical evaluation and 100% confidentiality of participant's data. Feedback from the participants on the reported data is encouraged and customer's satisfaction is measured on regular basis by sending out questionnaires.

2.2 PROTOCOL

The protocol followed in the organization of this proficiency test was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of June 2018 (iis-protocol, version 3.5). This protocol is electronically available through the iis website www.iisnl.com, from the FAQ page.

2.3 CONFIDENTIALITY STATEMENT

All data presented in this report must be regarded as confidential and for use by the participating companies only. Disclosure of the information in this report is only allowed by means of the entire report. Use of the contents of this report for third parties is only allowed by written permission of the Institute for Interlaboratory Studies. Disclosure of the identity of one or more of the participating companies will be done only after receipt of a written agreement of the companies involved.

2.4 SAMPLES

For the preparation of the sample for the regular analyzes in Fuel Oil a batch of approximately 200 liters Fuel Oil was obtained from a third party. After homogenization 185 amber glass bottles of 1 L were filled and labelled #23275.

The homogeneity of the subsamples was checked by determination of Density at 15 °C in accordance with ISO12185 on 8 stratified randomly selected subsamples.

	Density at 15 °C in kg/m ³
sample #23275-1	1007.9
sample #23275-2	1008.0
sample #23275-3	1007.7
sample #23275-4	1007.8
sample #23275-5	1007.8
sample #23275-6	1007.8
sample #23275-7	1007.8
sample #23275-8	1007.8

Table 2: homogeneity test results of subsamples #23275

From the above test results the repeatability was calculated and compared with 0.3 times the reproducibility of the reference test method in agreement with the procedure of ISO13528, Annex B2 in the next table.

	Density at 15 °C in kg/m ³
r (observed)	0.2
reference test method	ISO12185:96
0.3 x R (reference test method)	0.5

Table 3: evaluation of the repeatability of subsamples #23275

The calculated repeatability is in agreement with 0.3 times the reproducibility of the reference test method. Therefore, homogeneity of the subsamples was assumed.

For the preparation of the sample for the analyzes of Metals in Fuel Oil a batch of approximately 15 liters of Fuel Oil which contains several metals was obtained from a third party. After homogenization 135 PE bottles of 100 mL were filled and labelled #23276. The homogeneity of the subsamples was checked by determination of Nickel and Vanadium in accordance with IP501 on 8 stratified randomly selected subsamples.

	Nickel in mg/kg	Vanadium in mg/kg
sample #23276-1	18.0	37.6
sample #23276-2	17.3	37.8
sample #23276-3	16.4	36.0
sample #23276-4	16.4	35.4
sample #23276-5	18.2	35.0
sample #23276-6	16.4	35.9
sample #23276-7	16.4	36.2
sample #23276-8	16.5	35.8

Table 4: homogeneity test results of subsamples #23276

From the above test results the repeatabilities were calculated and compared with 0.3 times the corresponding reproducibility of the reference test method in agreement with the procedure of ISO13528, Annex B2 in the next table.

	Nickel in mg/kg	Vanadium in mg/kg
r (observed)	2.2	2.8
reference test method	IP470:05	IP470:05
0.3 x R (reference test method)	3.3	5.9

Table 5: evaluation of the repeatabilities of subsamples #23276

The calculated repeatabilities are in agreement with 0.3 times the corresponding reproducibility of the reference test method. Therefore, homogeneity of the subsamples was assumed.

For the preparation of the sample for the analyzes of Bromine and P-value in Fuel Oil a batch of approximately 130 liters of Fuel Oil was obtained from a third party. After homogenization 70 amber glass bottles of 1 L were filled and labelled #23277.

The homogeneity of the subsamples was checked by determination of Density at 15 °C in accordance with ISO12185 on 8 stratified randomly selected subsamples.

	Density at 15 °C in kg/m ³
sample #23277-1	987.1
sample #23277-2	986.9
sample #23277-3	986.9
sample #23277-4	987.1
sample #23277-5	987.1
sample #23277-6	987.1
sample #23277-7	987.1
sample #23277-8	987.1

Table 6: homogeneity test results of subsamples #23277

From the above test results the repeatability was calculated and compared with 0.3 times the reproducibility of the reference test method in agreement with the procedure of ISO13528, Annex B2 in the next table.

	Density at 15 °C in kg/m ³
r (observed)	0.3
reference test method	ISO12185:96
0.3 x R (reference test method)	0.5

Table 7: evaluation of the repeatability of subsamples #23277

The calculated repeatability is in agreement with 0.3 times the reproducibility of the reference test method. Therefore, homogeneity of the subsamples was assumed.

For the preparation of the sample for the Compatibility Determination two different batches A and B of Fuel Oil, which were not compatible, of approximately 5 liters each were obtained from a third party. After homogenization 80 amber glass vials of 40 mL were filled with batch A and 80 amber glass vials of 40 mL were filled with batch B, respectively labelled A and B and all labelled #23278. One subsample A and one subsample B were put together in a plastic bag and the bag was labelled #23278. The homogeneity of subsamples A and B was checked by determination of Density at 15 °C in accordance with ISO12185 on respectively 8 stratified randomly selected subsamples.

	Sample A - Density at 15 °C in kg/m ³	Sample B - Density at 15 °C in kg/m ³
sample #23278-1	0.9900	0.9939
sample #23278-2	0.9899	0.9939
sample #23278-3	0.9898	0.9940
sample #23278-4	0.9898	0.9939
sample #23278-5	0.9898	0.9940
sample #23278-6	0.9902	0.9940
sample #23278-7	0.9901	0.9940
sample #23278-8	0.9899	0.9940

Table 8: homogeneity test results of subsamples #23278

From the above test results the repeatabilities were calculated and compared with 0.3 times the corresponding reproducibility of the reference test method in agreement with the procedure of ISO13528, Annex B2 in the next table.

	Sample A - Density at 15 °C in kg/m ³	Sample B - Density at 15 °C in kg/m ³
r (observed)	0.4	0.1
reference test method	ISO12185:96	ISO12185:96
0.3 x R (reference test method)	0.5	0.5

Table 9: evaluation of the repeatabilities of subsamples #23278

The calculated repeatabilities are in agreement with 0.3 times the corresponding reproducibility of the reference test method. Therefore, homogeneity of the subsamples was assumed.

Depending on the registration of the participant the appropriate set of PT samples was sent on November 22, 2023. An SDS was added to the sample package.

2.5 STABILITY OF THE SAMPLES

The stability of Fuel Oil packed in the amber glass and PE bottles was checked. The material was found sufficiently stable for the period of the proficiency test.

2.6 ANALYZES

The participants were requested to determine on sample #23275: Total Acid Number, API Gravity, Ash Content, Asphaltenes, Calculated Carbon Aromaticity Index, Carbon Residue micro method, Conradson Carbon Residue, Density at 15 °C, Flash Point PMcc, Heat of Combustion (Gross and Net), Hydrogen Sulfide, Kinematic Viscosity at 50 °C and 100 °C, Kinematic Viscosity Stabinger at 50 °C and 100 °C, Nitrogen, Pour Point (Lower, Upper and Automated), Sediment by Extraction, Total Sediment (Existent, Accelerated and Potential), Total Sulfur, Water by distillation, Water and Sediment, Vacuum Distillation at 10 mmHg but reported as AET (IBP, 5%, 10%, 20%, 30%, 40%, 50% recovered and FBP), Total Carbon, Total Hydrogen and Total Nitrogen (CHN Analysis). Also, some extra information was requested about the determination of Total Acid Number.

On sample #23276 it was requested to determine Aluminum as Al, Silicon as Si, Sum Aluminum and Silicon, Iron as Fe, Nickel as Ni, Sodium as Na, Vanadium as V, Calcium as Ca, Phosphorus as P and Zinc as Zn.

On sample #23277 it was requested to determine Bromine Number on distillate <360 °C AET, P-value SMS1600, P-ratio, FR_{max} and Po (D7060), P-value, Pa, Po, SE and FR_{5/1} (D7112), Separability Number and Toluene dilution ratio (D7061).

On sample #23278 it was requested to determine the Compatibility rating. Also, some extra information was requested about the determination of Compatibility.

It was explicitly requested to treat the samples as if they were routine samples and to report the test results using the indicated units on the report form and not to round the test results, but report as much significant figures as possible. It was also requested not to report 'less than' test results, which are above the detection limit, because such test results cannot be used for meaningful statistical evaluations.

To get comparable test results a detailed report form and a letter of instructions are prepared. On the report form the reporting units are given as well as the reference test methods (when applicable) that will be used during the evaluation. The detailed report form and the letter of instructions are both made available on the data entry portal www.kpmd.co.uk/sgs-iis/. The participating laboratories are also requested to confirm the sample receipt on this data entry portal. The letter of instructions can also be downloaded from the iis website www.iisnl.com.

3 RESULTS

During five weeks after sample dispatch, the test results of the individual laboratories were gathered via the data entry portal www.kpmd.co.uk/sgs-iis/. The reported test results are tabulated per determination in appendix 1 of this report. The laboratories are presented by their code numbers.

Directly after the deadline, a reminder was sent to those laboratories that had not reported test results at that moment. Shortly after the deadline, the available test results were screened for suspect data. A test result was called suspect in case the Huber Elimination Rule (a robust outlier test) found it to be an outlier. The laboratories that produced these suspect data were asked to check the reported test results (no reanalyzes). Additional or corrected test results are used for data analysis and the original test results are placed under 'Remarks' in the result tables in appendix 1. Test results that came in after the deadline were not taken into account in this screening for suspect data and thus these participants were not requested for checks.

3.1 STATISTICS

The protocol followed in the organization of this proficiency test was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of June 2018 (iis-protocol, version 3.5).

For the statistical evaluation the *unrounded* (when available) figures were used instead of the rounded test results. Test results reported as '<...' or '>...' were not used in the statistical evaluation.

First, the normality of the distribution of the various data sets per determination was checked by means of the Lilliefors-test, a variant of the Kolmogorov-Smirnov test and by the calculation of skewness and kurtosis. Evaluation of the three normality indicators in combination with the visual evaluation of the graphic Kernel density plot, lead to judgement of the normality being either 'unknown', 'OK', 'suspect' or 'not OK'. After removal of outliers, this check was repeated. If a data set does not have a normal distribution, the (results of the) statistical evaluation should be used with due care.

The assigned value is determined by consensus based on the test results of the group of participants after rejection of the statistical outliers and/or suspect data.

According to ISO13528 all (original received or corrected) results per determination were submitted to outlier tests. In the iis procedure for proficiency tests, outliers are detected prior to calculation of the mean, standard deviation and reproducibility. For small data sets, Dixon (up to 20 test results) or Grubbs (up to 40 test results) outlier tests can be used. For larger data sets (above 20 test results) Rosner's outlier test can be used. Outliers are marked by D(0.01) for the Dixon's test, by G(0.01) or DG(0.01) for the Grubbs' test and by R(0.01) for the Rosner's test. Stragglers are marked by D(0.05) for the Dixon's test, by G(0.05) or DG(0.05) for the Grubbs' test and by R(0.05) for the Rosner's test. Both outliers and stragglers were not included in the calculations of averages and standard deviations.

For each assigned value the uncertainty was determined in accordance with ISO13528. Subsequently the calculated uncertainty was evaluated against the respective requirement based on the target reproducibility in accordance with ISO13528. In this PT the criterion of ISO13528, paragraph 9.2.1, was met for all evaluated tests. Therefore, the uncertainty of all assigned values may be negligible and need not be included in the PT report.

Finally, the reproducibilities were calculated from the standard deviations by multiplying them with a factor of 2.8.

3.2 GRAPHICS

In order to visualize the data against the reproducibilities from literature, Gauss plots were made, using the sorted data for one determination (see appendix 1). On the Y-axis the reported test results are plotted. The corresponding laboratory numbers are on the X-axis. The straight horizontal line presents the consensus value (a trimmed mean). The four striped lines, parallel to the consensus value line, are the +3s, +2s, -2s and -3s target reproducibility limits of the selected reference test method. Outliers and other data, which were excluded from the calculations, are represented as a cross. Accepted data are represented as a triangle.

Furthermore, Kernel Density Graphs were made. This is a method for producing a smooth density approximation to a set of data that avoids some problems associated with histograms. Also, a normal Gauss curve (dotted line) was projected over the Kernel Density Graph (smooth line) for reference. The Gauss curve is calculated from the consensus value and the corresponding standard deviation.

3.3 Z-SCORES

To evaluate the performance of the participating laboratories the z-scores were calculated. As it was decided to evaluate the performance of the participants in this proficiency test (PT) against the literature requirements (derived from e.g. ISO or ASTM test methods), the z-scores were calculated using a target standard deviation. This results in an evaluation independent of the variation in this interlaboratory study.

The target standard deviation was calculated from the literature reproducibility by division with 2.8. In case no literature reproducibility was available, other target values were used, like Horwitz or an estimated reproducibility based on former iis proficiency tests.

When a laboratory did use a test method with a reproducibility that is significantly different from the reproducibility of the reference test method used in this report, it is strongly advised to recalculate the z-score, while using the reproducibility of the actual test method used, this in order to evaluate whether the reported test result is fit-for-use.

The z-scores were calculated according to:

$$Z_{(\text{target})} = (\text{test result} - \text{average of PT}) / \text{target standard deviation}$$

The $Z_{(\text{target})}$ scores are listed in the test result tables in appendix 1.

Absolute values for $z < 2$ are very common and absolute values for $z > 3$ are very rare. Therefore, the usual interpretation of z-scores is as follows:

$ z < 1$	good
$1 < z < 2$	satisfactory
$2 < z < 3$	questionable
$3 < z $	unsatisfactory

4 EVALUATION

In this proficiency test some problems were encountered with the dispatch of the samples. Therefore, the reporting time on the data entry portal was extended with another two weeks. For the regular Fuel Oil PT ten participants reported test results after the extended reporting date and eight other participants did not report any test results.

For the PT on Metals in Fuel Oil six participants reported test results after the extended reporting date and twenty-one other participants did not report any test results.

For the PT on Bromine and P-value in Fuel Oil four participants reported test results after the extended reporting date and thirteen other participants did not report any test results.

For the PT on Compatibility in Fuel Oil two participants reported test results after the extended reporting date and eleven other participants did not report any test results.

Not all participants were able to report all tests requested.

In total 149 participants reported 3055 numerical test results. Observed were 133 outlying test results, which is 4.4%. In proficiency tests outlier percentages of 3% - 7.5% are quite normal.

Not all data sets proved to have a normal Gaussian distribution. These are referred to as “not OK” or “suspect”. The statistical evaluation of these data sets should be used with due care, see also paragraph 3.1.

4.1 EVALUATION PER SAMPLE AND PER TEST

In this section the reported test results are discussed per sample and per test. The test methods which were used by the various laboratories were taken into account for explaining the observed differences when possible and applicable. These test methods are also in the tables together with the original data in appendix 1. The abbreviations, used in these tables, are explained in appendix 3.

In the iis PT reports ASTM test methods are referred to with a number (e.g. D189) and an added designation for the year that the test method was adopted or revised (e.g. D189:06). When a method has been reapproved an “R” will be added and the year of approval (e.g. D189:06R19).

sample #23275

Total Acid Number: The group of participants had difficulty to meet the target requirements.

Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the requirements of ASTM D664:18e2 procedure A or B at both end points. When evaluated separately for the type of end point used the calculated reproducibilities after rejection of the statistical outliers are still not in agreement with the corresponding requirements of ASTM D664:18e2 procedure A or B at both end points.

API Gravity:

The group of participants may have had difficulty to meet the target requirements depending on the test method used. Six statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D1298:12bR17e01 but not with ASTM D4052:22.

Ash Content:

The group of participants had difficulty to meet the target requirements. Nine statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the requirements of ISO6245:01 nor with ASTM D482:19.

Asphaltenes:

The group of participants met the target requirements. Six statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP143:04R21.

Calculated Carbon Aromaticity Index: The group of participants met the target requirements.

Two statistical outliers were observed and two other test results were excluded. The calculated reproducibility after rejection of the suspect data is in agreement with the requirements of ISO8217:17.

Carbon Residue micro method: The group of participants may have had difficulty to meet the target requirements depending on the test method used. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ISO10370:14 but not with ASTM D4530:15R20.

Conradson Carbon Residue: The group of participants met the target requirements. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is in agreement with the requirements of ASTM D189:06R19.

Density at 15 °C: The group of participants met the target requirements. Nine statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ISO12185:96.

Flash Point PMcc: The group of participants met the target requirements. Eight statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ISO2719-B:16 and ASTM D93-B:20.

Heat of Combustion (Gross): The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D240:19.

Heat of Combustion (Net): The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D240:19

Hydrogen Sulfide: The reporting participants agreed on a value near or below the application range. Therefore, no z-scores are calculated.

Kinematic Viscosity at 50 °C: The group of participants met the target requirements. Four statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ISO3104:23.

Kinematic Viscosity at 100 °C: The group of participants met the target requirements. Three statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ISO3104:23.

Viscosity Stabinger at 50 °C: The group of participants met the target requirements. No statistical outliers were observed. The calculated reproducibility is in agreement with the requirements of ASTM D7042:21a.

Viscosity Stabinger at 100 °C: The group of participants met the target requirements. No statistical outliers were observed. The calculated reproducibility is in agreement with the requirements of ASTM D7042:21a.

Nitrogen: The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D5762:18a.

Pour Point Lower: The group of participants met the target requirements. No statistical outliers were observed. The calculated reproducibility is in agreement with the requirements of ISO3016:19.

Pour Point Upper: The group of participants met the target requirements. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is in agreement with the requirements of ISO3016:19.

Pour Point Automated: The group of participants had difficulty to meet the target requirements. Three statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the requirements of ASTM D5950:14R20.

Sediment by Extraction: The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D473:22.

Total Sediment Existent (TSE): The group of participants met the target requirements. Three statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM IP375:11R22.

Total Sediment Accelerated (TSA): The group of participants met the target requirements. Six statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP390:11R17.

Total Sediment Potential (TSP): The group of participants met the target requirements. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is in agreement with the requirements of IP390:11R17.

Total Sulfur: The group of participants may have had difficulty to meet the target requirements depending on the test method used. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ISO8754:03 but not with ASTM D4294:21.

Water by distillation: The group of participants met the target requirements. No statistical outliers were observed. The calculated reproducibility is in agreement with the requirements of ISO3733:99 and ASTM D95:23.

Water and Sediment: The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D1796:22.

Vacuum Distillation at 10 mmHg but reported as AET: The group of participants met the target requirements. In total sixteen statistical outliers were observed over eight distillation parameters and eight other test results were excluded. All calculated reproducibilities after rejection of the suspect data are in agreement with the requirements of ASTM D1160:18.

CHN Analysis: The group of participants may have had difficulty to meet the target requirements depending on the type of analysis. In total four statistical outliers were observed. The calculated reproducibilities for Carbon and Hydrogen after rejection of the statistical outliers are in agreement with the requirements of ASTM D5291-ABC:21. The calculated reproducibility for Nitrogen after rejection of the statistical outliers is not in agreement with the requirements of ASTM D5291-D:21.

sample #23276

Aluminum: The group of participants met the target requirements. Three statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 and IP501:05R19.

Silicon: The group of participants may have had difficulty to meet the target requirements depending on the test method used. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 but not with IP501:05R19.

Sum Aluminum and Silicon: The group of participants may have had difficulty to meet the target requirements depending on the test method used. Three statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 but not with IP501:05R19.

Iron: The group of participants may have had difficulty to meet the target requirements depending on the test method used. No statistical outliers were observed. The calculated reproducibility is in agreement with the requirements of IP470:05 but not with IP501:05R19.

- Nickel: The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 and IP501:05R19.
- Sodium: The group of participants met the target requirements. Four statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 and IP501:05R19.
- Vanadium: The group of participants met the target requirements. Four statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 and IP501:05R19.
- Calcium: The group of participants met the target requirements. Four statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of IP470:05 and IP501:05R19.
- Phosphorus: The group of participants met the target requirements. Five statistical outliers were observed and one other test result was excluded. The calculated reproducibility after rejection of the suspect data is in agreement with the requirements of IP470:05 and IP501:05R19.
- Zinc: The group of participants had difficulty to meet the target requirements. One statistical outlier was observed and one other test result was excluded. The calculated reproducibility after rejection of the suspect data is not in agreement with the requirements of IP470:05 nor with IP501:05R19.

Finally, it should be noted that proper attention for homogenization is crucial for a material such as Fuel Oil. It is very susceptible to problems when not handled correctly due to the nature of the material. Practically every test method for the determination of metals in Fuel Oil has similar statements regarding homogenization. It is recommended to use a quality control fuel oil with known amounts of metals like Al, Fe, Si and V. This control standard may be of use to detect deviations in metals with respect to the preparation steps.

sample #23277

Bromine Number: The group of participants met the target requirements. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the requirements of ASTM D1159:23.

P-value SMS1600: The group of participants had difficulty to meet the target requirements. No statistical outliers were observed. The calculated reproducibility is not in agreement with the requirements of SMS1600.

P-ratio, FR_{max} and Po D7060: Only a few participants reported test results. Therefore, no z-scores are calculated.

P-value, Pa, Po, SE and FR_{5/1} D7112: Only one participant reported test results.

Separability Number D7061: Only a few participants reported test results. Therefore, no z-scores are calculated.

Toluene dilution ratio D7061: Only a few participants reported test results. Therefore, no z-scores are calculated.

sample #23278

Compatibility rating: The group of participants had difficulty to meet the target requirements.

Five statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is not in agreement with the requirements of ASTM D4740-M:20.

When evaluated separately for type of reference for spot determination the calculated reproducibility after rejection of the statistical outliers is still not in agreement with the requirements of ASTM D4740-M:20.

4.2 PERFORMANCE EVALUATION FOR THE GROUP OF LABORATORIES

A comparison has been made between the reproducibility as declared by the reference test method and the reproducibility as found for the group of participating laboratories. The number of significant test results, the average, the calculated reproducibility (2.8 * standard deviation) and the target reproducibility derived from reference methods are presented in the next tables.

Parameter	unit	n	average	2.8 * sd	R(lit)

Table 12: reproducibilities of tests on sample #23277 and sample #23278

Without further statistical calculations it can be concluded that for many tests there is a good compliance of the group of participants with the reference test methods. The problematic tests have been discussed in paragraph 4.1.

4.3 COMPARISON OF THE PROFICIENCY TEST OF DECEMBER 2023 WITH PREVIOUS PTS

	December 2023	December 2022	June 2022	December 2021	June 2021
Number of reporting laboratories	149	152	147	139	159
Number of test results	3055	3163	2488	3146	2744
Number of statistical outliers	133	85	85	63	108
Percentage of statistical outliers	4.4%	2.7%	3.4%	2.0%	3.9%

Table 13: comparison with previous proficiency tests

In proficiency tests outlier percentages of 3% - 7.5% are quite normal.

The performance of the determinations of the proficiency tests was compared to the requirements of the reference test methods. The conclusions are given in the following table.

Table 14: comparison of determinations to the reference test methods

For results between brackets no z-scores are calculated.

The following performance categories were used:

- ++ : group performed much better than the reference test method
- + : group performed better than the reference test method
- +/- : group performance equals the reference test method
- : group performed worse than the reference test method
- : group performed much worse than the reference test method
- n.e. : not evaluated

APPENDIX 2**Number of participants per country**

1 lab in ARGENTINA	1 lab in LIBERIA
1 lab in AUSTRALIA	1 lab in MALI
1 lab in AUSTRIA	1 lab in MALTA
1 lab in AZERBAIJAN	1 lab in MARTINIQUE
3 labs in BELGIUM	1 lab in MAURITIUS
1 lab in BRAZIL	1 lab in MOROCCO
2 labs in BULGARIA	8 labs in NETHERLANDS
1 lab in CANADA	2 labs in NIGERIA
1 lab in COLOMBIA	1 lab in NORTH MACEDONIA, Republic of
1 lab in CONGO Brazzaville	1 lab in PANAMA
1 lab in COTE D'IVOIRE	2 labs in PHILIPPINES
1 lab in CROATIA	3 labs in PORTUGAL
2 labs in CZECH REPUBLIC	2 labs in ROMANIA
1 lab in DENMARK	17 labs in RUSSIAN FEDERATION
1 lab in DJIBOUTI	4 labs in SAUDI ARABIA
3 labs in EGYPT	2 labs in SERBIA
4 labs in ESTONIA	1 lab in SINGAPORE
4 labs in FINLAND	1 lab in SLOVAKIA
4 labs in FRANCE	1 lab in SLOVENIA
2 labs in GEORGIA	1 lab in SOUTH AFRICA
2 labs in GERMANY	7 labs in SPAIN
11 labs in GREECE	1 lab in SUDAN
1 lab in GUAM	3 labs in SWEDEN
1 lab in INDONESIA	1 lab in TAIWAN
1 lab in IRAQ	2 labs in TANZANIA
2 labs in IRELAND	1 lab in TOGO
2 labs in ISRAEL	1 lab in TURKIYE
1 lab in ITALY	2 labs in TURKMENISTAN
2 labs in KAZAKHSTAN	5 labs in UNITED ARAB EMIRATES
1 lab in KENYA	8 labs in UNITED KINGDOM
1 lab in KINGDOM OF BAHRAIN	8 labs in UNITED STATES OF AMERICA
3 labs in KOREA, Republic of	1 lab in VIETNAM

APPENDIX 3

Abbreviations

C	= final test result after checking of first reported suspect test result
D(0.01)	= outlier in Dixon's outlier test
D(0.05)	= straggler in Dixon's outlier test
G(0.01)	= outlier in Grubbs' outlier test
G(0.05)	= straggler in Grubbs' outlier test
DG(0.01)	= outlier in Double Grubbs' outlier test
DG(0.05)	= straggler in Double Grubbs' outlier test
R(0.01)\R(1)	= outlier in Rosner's outlier test
R(0.05)\R(5)	= straggler in Rosner's outlier test
E	= calculation difference between reported test result and result calculated by iis
W	= test result withdrawn on request of participant
ex	= test result excluded from statistical evaluation
n.a.	= not applicable
n.e.	= not evaluated
n.d.	= not detected
fr.	= first reported
f+?	= possibly a false positive test result?
f-?	= possibly a false negative test result?
SDS	= Safety Data Sheet
