1 INTRODUCTION

Since 1997 the Institute for Interlaboratory Studies (iis) organizes a proficiency scheme for the determination of banned aromatic amines from AZO Dyes in Textile. During the annual proficiency testing program 2022/2023 it was decided to continue the proficiency test for the determination of banned aromatic amines derived from AZO Dyes in Textile.

In this interlaboratory study 139 laboratories in 31 countries registered for participation, see appendix 4 for the number of participants per country. In this report the results of the AZO Dyes in Textile proficiency test are presented and discussed. This report is also electronically available through the iis website www.iisnl.com.

2 SET UP

The Institute for Interlaboratory Studies (iis) in Spijkenisse, the Netherlands, was the organizer of this proficiency test (PT). Sample analyzes for fit-for-use and homogeneity testing were subcontracted to an ISO/IEC17025 accredited laboratory.

It was decided to send two different textile samples of approximately 3 grams each labelled #23595 and #23596 respectively.

The participants were requested to report rounded and unrounded test results. The unrounded test results were preferably used for statistical evaluation.

2.1 ACCREDITATION

The Institute for Interlaboratory Studies in Spijkenisse, the Netherlands, is accredited in agreement with ISO/IEC17043:2010 (R007), since January 2000, by the Dutch Accreditation Council (Raad voor Accreditatie). This PT falls under the accredited scope. This ensures strict adherence to protocols for sample preparation and statistical evaluation and 100% confidentiality of participant's data. Feedback from the participants on the reported data is encouraged and customer's satisfaction is measured on regular basis by sending out questionnaires.

2.2 PROTOCOL

The protocol followed in the organization of this proficiency test was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organisation, Statistics and Evaluation' of June 2018 (iis-protocol, version 3.5). This protocol is electronically available through the iis website www.iisnl.com, from the FAQ page.

2.3 CONFIDENTIALITY STATEMENT

All data presented in this report must be regarded as confidential and for use by the participating companies only. Disclosure of the information in this report is only allowed by means of the entire report. Use of the contents of this report for third parties is only allowed by written permission of the Institute for Interlaboratory Studies. Disclosure of the identity of one or more of the participating companies will be done only after receipt of a written agreement of the companies involved.

2.4 SAMPLES

For the first sample a batch of purple polyamide textile made positive on some AZO Dyes was selected. The batch was cut into small pieces and after homogenization 185 small plastic bags were filled with approximately 3 grams each and labelled #23595.

The homogeneity of the subsamples was checked by the determination of o-Toluidine and o-Anisidine using an in house test method on 8 stratified randomly selected subsamples.

	o-Toluidine in mg/kg	o-Anisidine in mg/kg
sample #23595-1	197	129
sample #23595-2	206	143
sample #23595-3	205	135
sample #23595-4	210	139
sample #23595-5	208	135
sample #23595-6	215	141
sample #23595-7	205	140
sample #23595-8	198	130

Table 1: homogeneity test results of subsamples #23595

From the above test results the repeatabilities were calculated and compared with 0.3 times the reproducibility of the reference method in agreement with the procedure of ISO13528, Annex B2, in the next table.

	o-Toluidine in mg/kg	o-Anisidine in mg/kg
r (observed)	16.6	14.4
reference method	iis memo 2202	iis memo 2202
0.3 x R (reference method)	36.3	24.1

Table 2: evaluation of the repeatabilities of subsamples #23595

The calculated repeatabilities are in agreement with 0.3 times the reproducibility of the reference method. Therefore, homogeneity of the subsamples was assumed.

For the second sample a batch of blue grinded cotton textile made positive on some AZO Dyes was selected. The batch was cut into small pieces and after homogenization 185 small plastic bags were filled with approximately 3 grams each and labelled #23596.

The batch for sample #23596 was used in a previous proficiency test on AZO Dyes in Textile as sample #14020 in PT iis14A01T. Therefore, homogeneity of the subsamples was assumed.

To each of the participating laboratories one textile sample labelled #23595 and one textile sample labelled #23596 were sent on May 3, 2023.

2.5 ANALYZES

The participants were requested to determine on both samples #23595 and #23596:

4-Aminodiphenyl (CAS No. 92-67-1)
Benzidine (CAS No. 92-87-5)
4-Chloro-o-toluidine (CAS No. 95-69-2)
2-Naphthylamine (CAS No. 91-59-8)
2-Amino-4-nitrotoluene (CAS No. 99-55-8)
4-Chloraniline (CAS No. 106-47-8)
2,4-Diaminoanisol (CAS No. 615-05-4)
4,4'-Diaminodiphenylmethane (CAS No. 101-77-9)
3,3'-Dichlorobenzidine (CAS No. 91-94-1)
3,3'-Dimethoxybenzidine (CAS No. 119-90-4)
3,3'-Dimethylbenzidine (CAS No. 119-93-7)
3,3'-Dimethyl-4,4'-Diaminodiphenylmethane (CAS No. 838-88-0)
p-Cresidine (CAS No. 120-71-8)
4,4'-Diamino-3,3'-dichlorodiphenylmethane (CAS No. 101-14-4)
4,4'-Diaminodiphenylether (CAS No. 101-80-4)
4,4'-Diaminodiphenylsulfide (CAS No. 139-65-1)
2,4-Diaminotoluene (CAS No. 95-80-7)
2,4,5-Trimethylaniline (CAS No. 137-17-7)
o-Anisidine (CAS No. 90-04-0)
2,4-Xyliidine (CAS No. 95-68-1)
2,5-Xyliidine (CAS No. 95-78-3)
2,6-Xyliidine (CAS No. 87-62-7)
Total Xyliidines
o-Aminoazotoluene (CAS No. 97-56-3)
o-Toluidine (CAS No. 95-53-4)
Sum of o-Aminoazotoluene and o-Toluidine

It was decided not to request 4-Aminoazobenzene, CAS no. 60-09-3 on both samples because the samples were not positive for this component.

To ensure homogeneity it was requested not to use less than 0.5 grams of the sample per determination. It was also requested to report if the laboratory was accredited to determine the reported components and to report some analytical details.

It was explicitly requested to treat the samples as if they were routine samples and to report the test results using the indicated units on the report form and not to round the test results but report as much significant figures as possible. It was also requested not to report 'less than' test results, which are above the detection limit, because such test results cannot be used for meaningful statistical evaluations.

To get comparable test results a detailed report form and a letter of instructions are prepared. On the report form the reporting units are given as well as the reference test methods (when applicable) that will be used during the evaluation. The detailed report form and the letter of instructions are both made available on the data entry portal www.kpmd.co.uk/sgs-iis-cts/. The participating laboratories are also requested to confirm the sample receipt on this data

entry portal. The letter of instructions can also be downloaded from the iis website www.iisnl.com.

3 RESULTS

During five weeks after sample dispatch, the test results of the individual laboratories were gathered via the data entry portal www.kpmd.co.uk/sgs-iis-cts/. The reported test results are tabulated per determination in appendices 1 and 2 of this report. The laboratories are presented by their code numbers.

Directly after the deadline, a reminder was sent to those laboratories that had not reported test results at that moment. Shortly after the deadline, the available test results were screened for suspect data. A test result was called suspect in case the Huber Elimination Rule (a robust outlier test) found it to be an outlier. The laboratories that produced these suspect data were asked to check the reported test results (no reanalyzes). Additional or corrected test results are used for data analysis and the original test results are placed under 'Remarks' in the result tables in appendices 1 and 2. Test results that came in after the deadline were not taken into account in this screening for suspect data and thus these participants were not requested for checks.

3.1 STATISTICS

The protocol followed in the organization of this proficiency test was the one as described for proficiency testing in the report 'iis Interlaboratory Studies: Protocol for the Organization, Statistics and Evaluation' of June 2018 (iis-protocol, version 3.5).

For the statistical evaluation the *unrounded* (when available) figures were used instead of the rounded test results. Test results reported as '<...' or '>...' were not used in the statistical evaluation.

First, the normality of the distribution of the various data sets per determination was checked by means of the Lilliefors-test, a variant of the Kolmogorov-Smirnov test and by the calculation of skewness and kurtosis. Evaluation of the three normality indicators in combination with the visual evaluation of the graphic Kernel density plot, lead to judgement of the normality being either 'unknown', 'OK', 'suspect' or 'not OK'. After removal of outliers, this check was repeated. If a dataset does not have a normal distribution, the (results of the) statistical evaluation should be used with due care.

The assigned value is determined by consensus based on the test results of the group of participants after rejection of the statistical outliers and/or suspect data.

According to ISO13528 all (original received or corrected) results per determination were submitted to outlier tests. In the iis procedure for proficiency tests, outliers are detected prior to calculation of the mean, standard deviation and reproducibility. For small data sets, Dixon (up to 20 test results) or Grubbs (up to 40 test results) outlier tests can be used. For larger data sets (above 20 test results) Rosner's outlier test can be used. Outliers are marked by D(0.01) for the Dixon's test, by G(0.01) or DG(0.01) for the Grubbs' test and by R(0.01) for the Rosner's test. Stragglers are marked by D(0.05) for the Dixon's test, by G(0.05) or

DG(0.05) for the Grubbs' test and by R(0.05) for the Rosner's test. Both outliers and stragglers were not included in the calculations of averages and standard deviations.

For each assigned value, the uncertainty was determined in accordance with ISO13528. Subsequently the calculated uncertainty was evaluated against the respective requirement based on the target reproducibility in accordance with ISO13528. In this PT, the criterion of ISO13528, paragraph 9.2.1 was met for all evaluated tests, therefore, the uncertainty of all assigned values may be negligible and need not be included in the PT report.

Finally, the reproducibilities were calculated from the standard deviations by multiplying these with a factor of 2.8.

3.2 GRAPHICS

In order to visualise the data against the reproducibilities from literature, Gauss plots were made, using the sorted data for one determination (see appendix 1). On the Y-axis the reported test results are plotted. The corresponding laboratory numbers are on the X-axis. The straight horizontal line presents the consensus value (a trimmed mean). The four striped lines, parallel to the consensus value line, are the +3s, +2s, -2s and -3s target reproducibility limits of the selected reference test method. Outliers and other data, which were excluded from the calculations, are represented as a cross. Accepted data are represented as a triangle.

Furthermore, Kernel Density Graphs were made. This is a method for producing a smooth density approximation to a set of data that avoids some problems associated with histograms. Also, a normal Gauss curve (dotted line) was projected over the Kernel Density Graph (smooth line) for reference. The Gauss curve is calculated from the consensus value and the corresponding standard deviation.

3.3 Z-SCORES

To evaluate the performance of the participating laboratories the z-scores were calculated. As it was decided to evaluate the performance of the participants in this proficiency test (PT) against the literature requirements (derived from e.g. ISO test methods), the z-scores were calculated using a target standard deviation. This results in an evaluation independent of the variation in this interlaboratory study.

The target standard deviation was calculated from the literature reproducibility by division with 2.8. In case no literature reproducibility was available, other target values were used, like Horwitz or an estimated reproducibility based on former iis proficiency tests.

When a laboratory did use a test method with a reproducibility that is significantly different from the reproducibility of the reference test method used in this report, it is strongly advised to recalculate the z-score, while using the reproducibility of the actual test method used, this in order to evaluate whether the reported test result is fit-for-use.

The z-scores were calculated according to:

$$Z_{(\text{target})} = (\text{test result} - \text{average of PT}) / \text{target standard deviation}$$

The $Z_{(\text{target})}$ scores are listed in the test result tables in appendix 1.

Absolute values for $z < 2$ are very common and absolute values for $z > 3$ are very rare.

Therefore, the usual interpretation of z-scores is as follows:

$ z < 1$	good
$1 < z < 2$	satisfactory
$2 < z < 3$	questionable
$3 < z $	unsatisfactory

4 EVALUATION

In this proficiency test no problems were encountered with the dispatch of the samples.

Nine participants reported test results after the final reporting date and three other participants did not report any test results. Not all participants were able to report all tests requested.

In total 136 participants reported 536 numerical test results. Observed were 9 outlying test results, which is 1.7%. In proficiency tests outlier percentages of 3% - 7.5% are quite normal.

Not all data sets proved to have a normal Gaussian distribution. These are referred to as "not OK" or "suspect". The statistical evaluation of these data sets should be used with due care, see also paragraph 3.1.

4.1 EVALUATION PER SAMPLE AND PER COMPONENT

In this section the reported test results are discussed per sample and per component. The test methods which were used by the various laboratories were taken into account for explaining the observed differences when possible and applicable. These test methods are also in the tables together with the original data in appendix 1. The abbreviations used in these tables are explained in appendix 5.

For the determination of Aromatic Amines derived from AZO colorants the ISO14362 method is considered to be the official test method. Two versions of ISO14362 were published in 2017. Part 1 of ISO14362 describes a method to detect certain aromatic amines that are banned. Part 3 of ISO14362 describes a method to detect 4-Aminoazobenzene.

Unfortunately, only for a few aromatic amines precision data are mentioned in this test method and when mentioned the precision data is often not for a large concentration range and sometimes not conclusive. As alternative for the aromatic amines not mentioned in the test method iis had used an estimated target reproducibility calculated with the Horwitz equation. Unfortunately, this could give a quite strict target value for the reproducibility. Therefore, iis decided to use the iis PT data gathered from 2010 to 2021 to estimate a more realistic target reproducibility for the evaluation of the quality of the test results. Furthermore, it was decided to use the same target reproducibly for all aromatic amines. The average

relative standard deviation over all iis PTs and components for Textile is 21%. This investigation is summarized in iis memo 2202.

sample #23595

o-Anisidine (CAS No. 90-04-0): This determination was not problematic. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is in agreement with the reproducibility derived from the iis memo 2202.

o-Toluidine (CAS No. 95-53-4): This determination was not problematic. Five statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the reproducibility derived from the iis memo 2202.

The participants agreed on a concentration near or below the limit of detection for all other components mentioned in paragraph 2.5. Therefore, no z-scores are calculated for these components. The reported test results are given in appendix 2.

sample #23596

Benzidine (CAS No. 92-87-5): This determination was not problematic. One statistical outlier was observed. The calculated reproducibility after rejection of the statistical outlier is in agreement with the reproducibility derived from the iis memo 2202.

3,3'-Dimethoxybenzidine (CAS No. 119-90-4): This determination was not problematic. Two statistical outliers were observed. The calculated reproducibility after rejection of the statistical outliers is in agreement with the reproducibility derived from the iis memo 2202.

The participants agreed on a concentration near or below the limit of detection for all other components mentioned in paragraph 2.5. Therefore, no z-scores are calculated for these components. The reported test results are given in appendix 2.

4.2 PERFORMANCE EVALUATION FOR THE GROUP OF LABORATORIES

A comparison has been made between the reproducibility as declared by the reference test method and the reproducibility as found for the group of participating laboratories. The number of significant test results, the average, the calculated reproducibility ($2.8 * \text{standard deviation}$) and the target reproducibility derived from reference methods are presented in the next tables.

Component	unit	n	average	$2.8 * \text{sd}$	R(target)
o-Anisidine	mg/kg	132	88.1	33.0	51.8
o-Toluidine	mg/kg	131	123.3	53.0	72.5

Table 3: reproducibilities of components on sample #23595

Component	unit	n	average	2.8 * sd	R(target)
Benzidine	mg/kg	133	69.2	33.5	40.7
3,3'-Dimethoxybenzidine	mg/kg	131	192.1	94.9	113.0

Table 4: reproducibilities of components on sample #23596

Without further statistical calculations it can be concluded that for all components there is a good compliance of the group of participants with the target reproducibility.

4.3 COMPARISON OF THE PROFICIENCY TEST OF MAY 2023 WITH PREVIOUS PTS

	May 2023	May 2022	March 2021	March 2020	March 2019
Number of reporting laboratories	136	146	150	126	165
Number of test results	536	431	291	380	299
Number of statistical outliers	9	9	30	2	11
Percentage of statistical outliers	1.7%	2.1%	10.3%	0.5%	3.7%

Table 5: comparison with previous proficiency tests

In proficiency tests, outlier percentages of 3% - 7.5% are quite normal.

The performance of the determinations of the proficiency test was compared to uncertainties observed in PTs over the years, expressed as relative standard deviation (RSD) of the PTs, see next table.

Component	May 2023	May 2022	March 2021	March 2020	2004 - 2019	iis memo 2202
4-Aminodiphenyl	n.e.	n.e.	n.e.	n.e.	18-36%	21%
Benzidine	17%	13%	n.e.	n.e.	12-35%	21%
4-Chloro-o-toluidine	n.e.	n.e.	n.e.	n.e.	24%	21%
2-Naphtylamine	n.e.	n.e.	n.e.	n.e.	27-41%	21%
4-Chloroaniline	n.e.	n.e.	n.e.	n.e.	27%	21%
2,4-Diaminoanisol	n.e.	n.e.	n.e.	n.e.	24-52%	21%
4,4'-Diaminodiphenylmethane	n.e.	n.e.	n.e.	n.e.	21%	21%
3,3'-Dimethoxybenzidine	18%	n.e.	n.e.	11%	11-31%	21%
3,3'-Dimethylbenzidine	n.e.	13%	n.e.	n.e.	15-36%	21%
4,4'-Diamino-3,3'-Dichlorodiphenylmethane	n.e.	n.e.	n.e.	n.e.	20-35%	21%
4,4'-Diaminodiphenylether	n.e.	n.e.	n.e.	n.e.	15%	21%
4,4'-Diaminodiphenylsulfide	n.e.	n.e.	n.e.	n.e.	18-26%	21%
2,4-Diaminotoluene	n.e.	n.e.	25%	n.e.	n.e.	21%
o-Anisidine	13%	n.e.	14%	n.e.	n.e.	21%
2,4-Xylidine	n.e.	n.e.	n.e.	n.e.	19-26%	21%
o-Aminoazotoluene	n.e.	n.e.	n.e.	n.e.	n.e.	21%
o-Toluidine	15%	n.e.	n.e.	n.e.	19-38%	21%

Component	May 2023	May 2022	March 2021	March 2020	2004 - 2019	iis memo 2202
Sum of o-aminoazotoluene and o-Toluidine	n.e.	n.e.	n.e.	35%	34%	21%
4-Aminoazobenzene	n.e.	26%	n.e.	n.e.	30%	21%

Table 6: development of the uncertainties over the years

Aromatic amines not mentioned in table 6 are not determined in an iis PT yet.

The uncertainty (RSD) of the determined AZO dyes in Textile in this PT is in line with previous PTs.

Sample #23596 was used in a previous PT as sample #14020 in iis14A01T. The averages and the calculated reproducibilities for Benzidine and 3,3'-Dimethoxybenzidine in the 2023 PT are in line with the 2014 PT.

Component	unit	sample #23596			sample #14020		
		n	average	R(calc)	n	average	R(calc)
Benzidine	mg/kg	133	69.2	33.5	140	76.7	32.0
3,3'-Dimethoxybenzidine	mg/kg	131	192	95	147	220	128

Table 7: comparison of sample #23596 with #14020

4.4 EVALUATION OF THE ANALYTICAL DETAILS

The reported analytical details from the participants are listed in appendix 3. Based on the answers given by the participants the following can be summarized:

- 95% mentioned that they are accredited for determination of banned AZO Dyes in Textile.
- The samples were used as received by 50% of the participants, further cut or grinded by the other 50% of the participants.
- Almost all (98%) participants used 0.5 grams or more for sample intake.
- To release/extract the components from the sample 29% used Mechanical Shaking, 16% Soxhlet, 9% Thermal Desorption, 8% Ultrasonic, 3% ASE, 2% Stirrer and 33% used another technique.
- t-Butyl methyl ether and citrate buffer were the most reported solvents used to release the components.
- 90% reported an extraction time between 30 and 60 minutes.
- 80% reported an extraction temperature of 70 °C.
- 65% reported to have used the diatomaceous earth column.

For the detected components the calculated reproducibility is in agreement with the requirements of the target reproducibility, therefore no separate statistical analysis has been performed.

5 DISCUSSION

Almost all of the reporting participants were able to detect o-Anisidine and o-Toluidine in sample #23595, and Benzidine and 3,3'-Dimethoxybenzidine in sample #23596.

When the results of this interlaboratory study were compared to the Ecolabelling Standards and Requirements for Textiles in EU, it was noticed that not all participants would make identical decisions about the acceptability of the textiles for the determined components.

Ecolabel	baby clothes in mg/kg	in direct skin contact in mg/kg	no direct skin contact in mg/kg
Bluesign® RSL	<20	<20	<20
OEKO-TEX® 100	<20	<20	<20

Table 8: Bluesign® BSSL and OEKO-TEX® Ecolabelling Standards and Requirements for Textiles in EU

Almost all reporting laboratories, except three, would have rejected sample #23595 for all categories. Almost all reporting laboratories, except two, would have rejected sample #23596 for all categories.

6 CONCLUSION

Although it can be concluded that the majority of the participants have no problem with the determination of o-Anisidine, o-Toluidine, Benzidine and 3,3'-Dimethoxybenzidine in the samples of this PT, each participating laboratory will have to evaluate its performance in this study and decide about any corrective actions if necessary.

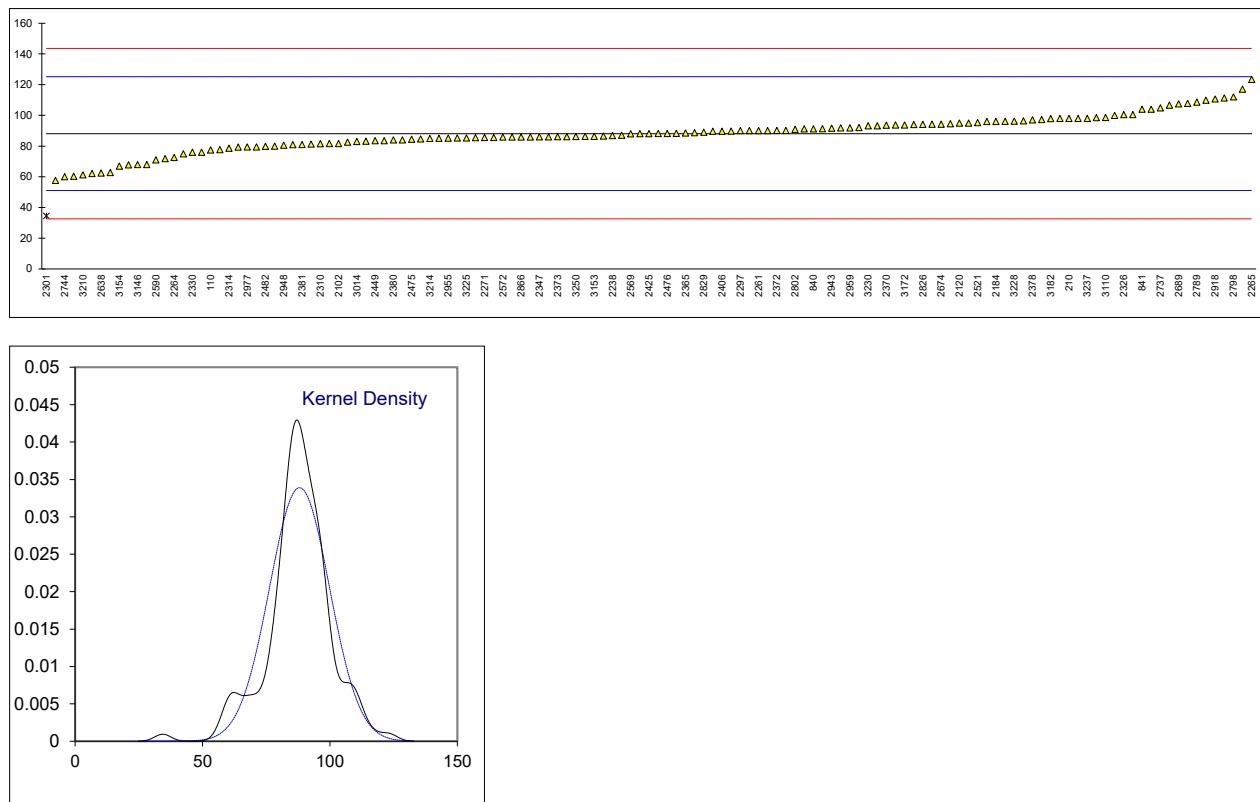

Therefore, participation on a regular basis in this scheme could be helpful to improve the performance and thus increase of the quality of the analytical results.

APPENDIX 2**Summary of other reported aromatic amines****Abbreviations of amine names**

4AD	= 4-Aminodiphenyl (CAS No. 92-67-1)
BD	= Benzidine (CAS No. 92-87-5)
4CoT	= 4-Chloro-o-toluidine (CAS No. 95-69-2)
2NA	= 2-Naphtylamine (CAS No. 91-59-8)
ANT	= 2-Amino-4-nitrotoluene (CAS No. 99-55-8)
4CA	= 4-Chloraniline (CAS No. 106-47-8)
DAA	= 2,4-Diaminoanisol (CAS No. 615-05-4)
DADM	= 4,4'-Diaminodiphenylmethane (CAS No. 101-77-9)
DCB	= 3,3'-Dichlorobenzidine (CAS No. 91-94-1)
DMoxB	= 3,3'-Dimethoxybenzidine (CAS No. 119-90-4)
DMB	= 3,3'-Dimethylbenzidine (CAS No. 119-93-7)
DDDM	= 3,3'-Dimethyl-4,4'-Diaminodiphenylmethane (CAS No. 838-88-0)
pC	= p-Cresidine (CAS No. 120-71-8)
DDM	= 4,4'-Diamino-3,3'-dichlorodiphenylmethane (CAS No. 101-14-4)
DDE	= 4,4'-Diaminodiphenylether (CAS No. 101-80-4)
DDS	= 4,4'-Diaminodiphenylsulfide (CAS No. 139-65-1)
24DAT	= 2,4-Diaminotoluene (CAS No. 95-80-7)
TMA	= 2,4,5-Trimethylaniline (CAS No. 137-17-7)
oA	= o-Anisidine (CAS No. 90-04-0)
24X	= 2,4-Xylylidine (CAS No. 95-68-1)
25X	= 2,5-Xylylidine (CAS No. 95-78-3)
26X	= 2,6-Xylylidine (CAS No. 87-62-7)
TX	= Total of Xylylidine
oAAT	= o-Aminoazotoluene (CAS No. 97-56-3)
oTol	= o-Toluidine (CAS No. 95-53-4)
oAAT&oTol	= Sum of o-Aminoazotoluene and o-Toluidine

Summary of other reported aromatic amines in sample #23595, see abbreviations above

8030	I followed ISO14362-1 chapter 10.4 and used the diatomaceous earth column

APPENDIX 4**Number of participants per country**

7 labs in BANGLADESH
1 lab in BRAZIL
1 lab in BULGARIA
3 labs in CAMBODIA
1 lab in EGYPT
4 labs in FRANCE
7 labs in GERMANY
1 lab in GUATEMALA
11 labs in HONG KONG
6 labs in INDIA
4 labs in INDONESIA
13 labs in ITALY
1 lab in JAPAN
4 labs in KOREA, Republic of
1 lab in MAURITIUS
2 labs in MOROCCO
34 labs in P.R. of CHINA
7 labs in PAKISTAN
1 lab in PERU
2 labs in PORTUGAL
1 lab in SINGAPORE
2 labs in SPAIN
2 labs in SRI LANKA
3 labs in TAIWAN
4 labs in THAILAND
1 lab in THE NETHERLANDS
2 labs in TUNISIA
5 labs in TURKEY
1 lab in U.S.A.
2 labs in UNITED KINGDOM
5 labs in VIETNAM

APPENDIX 5

Abbreviations

C	= final test result after checking of first reported suspect test result
D(0.01)	= outlier in Dixon's outlier test
D(0.05)	= straggler in Dixon's outlier test
G(0.01)	= outlier in Grubbs' outlier test
G(0.05)	= straggler in Grubbs' outlier test
DG(0.01)	= outlier in Double Grubbs' outlier test
DG(0.05)	= straggler in Double Grubbs' outlier test
R(0.01)	= outlier in Rosner's outlier test
R(0.05)	= straggler in Rosner's outlier test
E	= calculation difference between reported test result and result calculated by iis
W	= test result withdrawn on request of participant
ex	= test result excluded from statistical evaluation
n.a.	= not applicable
n.e.	= not evaluated
n.d.	= not detected
fr.	= first reported
f+?	= possibly a false positive test result?
f-?	= possibly a false negative test result?
