

## **Instructions to participants for the PT OPP and other Preservatives in Leather/Footwear iis25A07**

- \* Please **confirm sample receipt** as soon as you have received this package and checked the contents via the data entry portal [www.kpmd.co.uk/sgs-iis-cts](http://www.kpmd.co.uk/sgs-iis-cts). Please give date of receipt and press the "Save Date" button. Please inform the Institute for Interlaboratory Studies (iis) immediately when something is wrong with the package and/or samples via [nl.iis@sgs.com](mailto:nl.iis@sgs.com).
- \* This interlaboratory study concerns 2 **different** samples of leather: 1x red grinded leather labelled #25595 and 1x black leather pieces labelled #25596, both for the determination of OPP and other Preservatives. You received approximately 3 grams per sample. You can check the test scope of the sample in round iis25A07 via [www.kpmd.co.uk/sgs-iis-cts](http://www.kpmd.co.uk/sgs-iis-cts).
- \* **Please do not age nor dry the sample before the test, nor determine volatile matter!** The amount of sample is not sufficient to allow aging and/or determine the volatile matter content. For calculations (ISO13365:2020, §8) use  $D = 1$ , no volatile matter present ( $w = 0$ ).

Furthermore, please treat the samples **as if they were routine samples** and analyze them in the way you normally do in day-to-day circumstances. Each laboratory is advised to analyze only those components you normally do (but you are allowed to report all components if you like).

- \* **To ensure the homogeneity, please do not use less than 0.5 gram per determination.**
- \* **Reporting of test results:**

Within a time frame of five weeks test results can be entered or revised. Please report your test results via [www.kpmd.co.uk/sgs-iis-cts](http://www.kpmd.co.uk/sgs-iis-cts). It is not necessary to enter all test results in one session. Within the time frame you can add (or delete) test results and/or change test results or units. Please **do not forget** to hit the "Save/Submit" button after entering the test results. Please note that you will get a pop up to say that you have submitted your test results. You can check if your test results have been saved by logging out and logging in again. When your test results are still present it means that everything is OK and that your test results are received in good order.

On the report page is a column, titled "reference method". In case a method is mentioned in this column, it will be used for the calculation of the z-scores. It is of utmost importance to know that it is **not mandatory** to use this 'reference method' as test method. Please select the method that you used from the picklist under "Actual Method Used". When your method is not listed here, please select "Other" and write the method that you used in the comments.

Please report the test results using the indicated units. It is possible to report in the last column the test results rounded in accordance with the test method that was used and in the first result column the same test results but less rounded. Please note that it is not mandatory to report both 'rounded' and 'unrounded' test results. The 'unrounded' test results are preferably used for our statistical evaluations. However the 'rounded' test results will be used in case the 'unrounded' test results are not reported. We suggest to report extra significant figures in order to give more meaningful statistical evaluations. For example, when you found a test result of 95.223 mg/kg, we request you to report 95.223 mg/kg as 'unrounded' test result and 95.22 mg/kg as "rounded" test result.

It is also requested not to report 'less than' test results, which are above the detection limit, because such test results cannot be used for meaningful statistical evaluations.

For test results below the detection limit please do not use abbreviations like "nd" or "na" because these can be explained in various ways like "not determined", "not detected", "not applicable" and "not analyzed". Instead, please write in full.

To get more background of the analytical method we asked some additional questions. Please complete these questions as much as possible. It will help us to evaluate the results of the proficiency test. Thank you in advance.

**The official closing date for reporting test results for this PT is May 23, 2025.**

After the official closing date it is no longer possible to submit or correct test results via the data entry portal. When you cannot report via the portal or for unforeseen reasons cannot report before the closing date, please inform the Institute for Interlaboratory Studies (iis).

\* **For all communication (e.g. problems with the package/samples, login details for the data entry portal, not reporting in time) or any remarks/questions please contact:**
